Standard Plan Rate Book
State Fiscal Year 2026 Contract Rates
North Carolina Department of Health and Human Services

June 4, 2025

TABLE OF CONTENTS

Executive Summary **4**

1 Introduction **7**

2 Data Sources **8**

3 PHP Regions **9**

4 Population Groupings **10**
4.1 Standard Plan Population 10
4.2 Future Managed Care Populations 12
4.3 Excluded Populations 13

5 Service Categories **14**

6 Base Data Adjustments **16**
6.1 Non-Covered Populations and Services 16
6.2 Value-Added Services 17
6.3 Value-Based Payments 17
6.4 Encounter Data for Separate Payment Terms 18
6.5 Completion Factors 18
6.6 Encounter Data Under-Reporting Adjustment 19
6.7 Consideration for Additional Deliveries after Data Period 20
6.8 Institutions for Mental Diseases Adjustment 20

7 SFY 2024 Base Data Exhibits **21**

8 Capitation Rate Development **58**

9 Trend Assumptions **59**
9.1 Trend Development Methodology 59
9.2 Overall Trend Assumptions 59
9.2.1 Prescription Drugs 61
9.2.2 Seasonal Influenza, RSV, and COVID-19 62

10 Program Design Considerations **64**
10.1 Additional Adjustments to SFY 2024 Encounter Data 64
10.1.1 Unbilled State Lab Claims 64
10.2 Program Design Changes Effective During SFY 2024 64
10.2.1 BH Service Changes 64
10.2.2 Emerging Gene Therapy Considerations 65
10.2.3 BH Reimbursement Rate Increases 66
10.2.4 Dental Procedures at an Ambulatory Surgical Center 67
10.3 Program Design Changes Effective After SFY 2024 67
10.3.1 Expanded GLP-1 Coverage for Cardiovascular Risk Reduction, Obstructive Sleep Apnea, and Weight Loss Indications 67
10.3.2 FQHC/RHC Reimbursement Changes 68
10.3.3 Additional Items Evaluated, but not Adjusted For 69

11 Managed Care Assumptions **70**
11.1 Overall Managed Care Findings 70
11.2 LANE Analysis 71
11.3 PPA Analysis 72
11.4 HOP Savings 73

11.5 Pharmacy Benefits ... 74
11.5.1 Clinical Edits ... 74
11.5.2 Drug-Disease Matching (DxRx) Analysis ... 74

12 Additional Adjustments to Service Costs ... 76
12.1 Ongoing BH I/DD Tailored Plan Identification ... 76
12.2 Opt-In Acuity Factor Adjustment ... 76
12.3 Acuity Factor Due to Unwinding of MOE Requirements ... 78

13 Expansion Medical Cost and Enrollment Development ... 80
13.1 Base Data ... 80
13.2 Trend ... 81
13.3 Programmatic Changes ... 81
13.4 Managed Care ... 81
13.5 Other Service Adjustments ... 81
13.5.1 Ongoing BH I/DD Tailored Plan Identification ... 81
13.5.2 Opt-In Acuity Factor ... 82
13.5.3 Acuity Factor Due to Unwinding of the MOE Requirements ... 82

13.6 Expansion Enrollment Projections ... 82
13.7 Expansion Service Cost Adjustments ... 82
13.7.1 Demographic Acuity Adjustment ... 82
13.7.2 Pent-Up Demand ... 84
13.7.3 TPL ... 84

14 Non-Benefit Expense Considerations ... 85
14.1 Methodology and Data Sources ... 86
14.2 Program Management and Administrative Operations Personnel ... 87
14.3 Care Management Personnel ... 88
14.4 Non-Personnel Costs ... 90
14.5 Non-Benefit Expense Load Application to Capitation Rates ... 91
14.6 Profit/Underwriting Gain and Premium Taxes ... 91

15 Capitation Rate Development Exhibits ... 93

16 NC Select Drug List Case Payments ... 149

17 Other Considerations ... 151
17.1 Risk Corridor ... 151
17.2 Minimum PCP Expenditure Requirement ... 152
17.3 Performance Withholds ... 153
17.4 Risk Adjustment ... 154
17.5 MLR ... 154
17.5.1 Implied MLR Calculation Based on Capitation Rate Development ... 154
17.5.2 Minimum MLR Threshold ... 156

Appendix A — Maternity Event Criteria ... 158
Step 1: Identify Delivery Event ... 158
Step 2: Identify Prenatal and Postpartum Care ... 159
Step 3: Identify Other Pregnancy-Related Services ... 159
Budget-Neutral Maternity Adjustment ... 161

Appendix B — Other Population Eligibility Criteria ... 162
Future Managed Care Populations Criteria ... 162
Permanently Excluded Population Criteria ... 162

Appendix C — Supplemental Data for LTSS Services **164**
Appendix D — COS Criteria **165**
Appendix E — December 1, 2022 BH I/DD Tailored Plan Criteria **185**
Appendix F — Summary of Contractual Payment and Risk Sharing Terms **200**

EXECUTIVE SUMMARY

The State of North Carolina (State or North Carolina) Department of Health and Human Services (DHHS) implemented the Standard Plan Managed Care Program in a way that advances high-value care, improves population health, engages and supports providers, and establishes a sustainable program with predictable costs. At the core of these efforts is the goal to improve the health of North Carolinians through an innovative, whole person-centered, well-coordinated system of care, which addresses medical and non-medical drivers of health. In managed care, DHHS remains responsible for all aspects of the Medicaid program. However, as directed by the General Assembly, DHHS delegates the direct management of certain health services and financial risks to Standard Plan Prepaid Health Plans (PHPs). PHPs receive capitation payments and contract with providers to deliver health services to their members.

DHHS contracted with Mercer Government Human Services Consulting (Mercer), part of Mercer Health & Benefits LLC, to develop the State Fiscal Year (SFY) 2026 (July 1, 2025 through June 30, 2026) Standard Plan PHP capitation rates. Mercer has produced this Rate Book for DHHS as documentation of the development of the capitation rates effective in Contract Year 5 of managed care for the Standard Plan population. This Rate Book contains the final capitation rates and development process.

The capitation rates will be certified as actuarially sound in accordance with applicable laws and regulations, including Actuarial Standards of Practice, to comply with the Centers for Medicare & Medicaid Services regulations. Per 42 CFR §438.4(a), "actuarially sound capitation rates are projected to provide for all reasonable, appropriate, and attainable costs that are required under the terms of the contract and for the operation of the MCO, PIHP, or PAHP for the time period and the population covered under the terms of the contract, and such capitation rates are developed in accordance with the requirements in [42 CFR §438.4(b)]." Moreover, the capitation rates are meant to provide a reimbursement structure that will match payment to the expected financial risk of the managed care program designed for the Standard Plan population.

SFY 2026 Standard Plan Base Capitation Rates

The table below reflects the Standard Plan base rate per member per month (PMPM) for the July 1, 2025–June 30, 2026 rating period for covered populations and services; detailed summaries are provided in Section 15 of this Rate Book. These capitation rates represent a 3.5% increase compared to the SFY 2025 capitation rates, effective January 1, 2025, as summarized in the PHP communication dated December 6, 2024. Additionally, a new separate NC Select Drug List Case Payment will be implemented effective July 1, 2025. This is separate from the capitation rates summarized below. The payment rates for each included drug and rate development methodology are described in Section 16 of this Rate Book.

SFY 2026 Standard Plan Capitation Rates Effective July 1, 2025–June 30, 2026

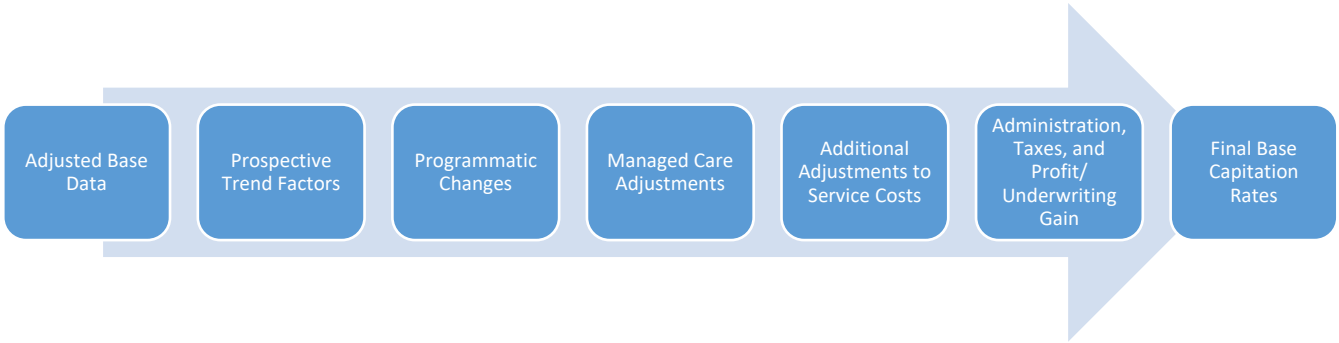
Category of Aid	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6	Statewide Average[1]
Aged, Blind, and Disabled	$2,168.38	$2,158.62	$2,229.38	$2,102.42	$1,914.92	$1,919.21	$2,078.39
Temporary Assistance for Needy Families (TANF), Newborns (<1 Year)	$1,044.29	$1,028.61	$1,045.67	$1,054.85	$967.59	$962.96	$1,021.55
TANF, Children (1 Year–20 Years)	$216.75	$192.99	$190.63	$184.16	$187.16	$179.99	$189.96
TANF, Adults (21+ Years)	$565.35	$546.10	$497.38	$503.33	$505.29	$494.55	$511.92
Maternity Event	$13,396.05	$13,814.14	$13,959.68	$13,391.95	$12,751.18	$13,679.34	$13,534.93

[1] Statewide averages are provided for illustrative purposes only.

Category of Aid	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6	Statewide Average[1]
Newly Eligible, Ages 19 Years–24 Years	$290.64	$285.95	$275.97	$269.56	$270.86	$260.91	$275.17
Newly Eligible, Ages 25 Years–34 Years	$416.28	$411.50	$396.75	$387.50	$389.15	$374.47	$395.40
Newly Eligible, Ages 35 Years–44 Years	$647.95	$639.53	$616.20	$600.84	$603.37	$581.45	$613.93
Newly Eligible, Ages 45 Years–64 Years	$1,029.25	$1,003.74	$966.67	$938.53	$943.42	$914.01	$963.37
Projected SFY 2026 Member Months	2,259,994	4,656,867	7,061,676	5,361,488	4,524,745	3,348,536	27,213,306

Capitation Rate Development Methodology

The rate-setting process is the means for determining the capitation payments DHHS will pay to the PHPs for each beneficiary enrolled in the program, regardless of the amount of future services that beneficiary receives. This process involves summarizing historical claims and eligibility data that represent the covered populations and services and projecting future medical claims costs on a PMPM basis into the rating period.



Mercer leveraged SFY 2024 encounter data to summarize cost and utilization information for the Standard Plan populations and as the basis for capitation rate development. For service category details, please see Section 5 of the Rate Book. Mercer also used member-level eligibility information provided by DHHS to summarize the data and identify the Standard Plan population.

The base data has been adjusted to account for historical program changes and considerations for PHP encounter reporting. Detailed methodology and impact of base data adjustments are outlined in Section 6 of the Rate Book. SFY 2024 base data summaries by region, population, and service category are included in Section 7 of the Rate Book. These data summaries serve as the historical base data used in SFY 2026 rate development.

Prospective adjustments were applied to the base data to project the historical information to the future rating period. Medical trend was evaluated and unit cost and utilization trend factors were developed for each of the major service categories. Overall, the trends reflect lower expected unit cost trends compared to prior years, while utilization trends are higher. Trends are summarized in Section 9.

Programmatic design changes as described in Section 10 were also considered to account for known design elements anticipated to impact projected claims expenditures. Many of the prospective program change adjustments impacting the SFY 2025 capitation rates were similarly applied to SFY 2026 capitation rates.

Managed care adjustments were applied to capture appropriate, assumed reductions and reasonable, offsetting increases in the utilization of certain services as a result of PHP utilization and care management initiatives.

Mercer's development of these adjustments was informed by analysis of Low-Acuity Non-Emergent emergency department (ED) utilization and Potentially Preventable Inpatient Admissions in the base encounter experience, as well as an analysis of inappropriate prescribing and/or dispensing patterns identified in the pharmacy claims data. Additionally, consideration was included for further inpatient and ED savings expected in Healthy Opportunities Pilot regions as a result of the pilot program. For the Expansion populations, no additional savings were assumed beyond what is already reflected in the TANF, Adults SFY 2024 base data experience. The analysis and findings of the managed care efficiency analysis are summarized in Section 11.

Member choice and ongoing Behavioral Health Intellectual and Developmental Disabilities Tailored Plan identification analyses were performed to evaluate the acuity implications of beneficiaries moving between the Standard Plan and Tailored Plan programs. Additionally, population adjustments were developed to address the impact of the continuous coverage unwinding process occurring after the end of the Coronavirus Disease 2019 Public Health Emergency Maintenance of Eligibility (MOE) requirements. This was considered in the development of the capitation rates for the Medicaid Expansion and Non-Expansion populations. These are summarized in Section 12.

Specific summaries and adjustments were warranted for the Expansion populations. In particular, Mercer relied on TANF Adult base data information and adjustments as the basis for Expansion capitation rates. This was necessary, given the limited experience available for Expansion populations during the SFY 2024 time period. A summary of all Expansion rate considerations is offered in Section 13.

The final component of the capitation rate development is the application of the non-benefit expense load. This portion of the capitation rates accounts for expected Standard Plan PHP administration and care management costs to operate the Standard Plan program. The non-benefit expense load includes consideration for general administration (including program management, administrative operations, and utilization management personnel), care management, profit/underwriting gain, and premium taxes imposed on the PHPs. Section 14 of the Rate Book provides additional information on the non-benefit expense considerations.

Lastly, DHHS will institute a new, separate case payment relating to the North Carolina Select Drug List. This case payment will be payable only to plans who incur costs associated with the administration of one of the included drugs. The estimated payment is intended to reflect the expected statutory federal rebate portion of the drug cost that the State will receive. Additional details on this new North Carolina Select Drug Case Payment structure and development is offered in Section 16.

Future Rating Considerations

Any future program, policy, or reimbursement changes, including those resulting from the current legislative session, with material cost impact on the Standard Plan program will be evaluated for future rate considerations.

This document has been prepared by Yemi Derebe, ASA, MAAA, Bob Karsten, ASA, MAAA, and David Salzwedel, ASA, MAAA, who are members of the American Academy of Actuaries and meet its US Qualification Standards for issuing statements of actuarial opinion.

1 INTRODUCTION

Mercer Government Human Services Consulting (Mercer), part of Mercer Health & Benefits LLC, has produced this Rate Book for the State of North Carolina (State or North Carolina) Department of Health and Human Services (DHHS) as documentation of the historical base data and capitation rate development process for the capitation rates effective July 1, 2025 through June 30, 2026, the fifth Contract Year of Standard Plan managed care.

As a part of capitation rate development, Mercer leveraged Standard Plan encounter data to summarize cost and utilization information for the Standard Plan population, which serves as the basis for capitation rate development. Given the timing of Medicaid Expansion launch in North Carolina (i.e., December 1, 2023), a full year of historical base data for the Expansion populations was not available at the time of rate development to rely on for the basis of State Fiscal Year (SFY) 2026 rates. Instead, Mercer has leveraged the Temporary Assistance for Needy Families (TANF), Adults historical data as the basis of Expansion rates, consistent with prior years, and used emerging Expansion experience, as appropriate, to inform select rate setting adjustments. Please refer to Section 13 for a discussion of base data and other rate-setting considerations for this population.

The intent of the Rate Book is to summarize historical data and key prospective rate considerations for the Standard Plan population to provide transparency into the current program costs and utilization, along with insight into the rate development process for Prepaid Health Plans (PHPs). Please refer to the Standard Plan PHP Contract for detailed program design information and requirements for the PHPs managing the program for the Standard Plan population.

This Rate Book includes information on the cost and utilization patterns of Standard Plan Medicaid eligibles by region, rate cell, and category of service (COS). Sections 2 through 7 provide information on the data summarization process, including an outline of population and service groups, adjustments applied to the base data, and detailed summaries by region, rate cell, and COS. Sections 8 through 12 provide information on prospective adjustments and considerations specific to Year 5 rates. Section 13 provides information specific to the Expansion rate-setting methodology. Section 14 summarizes the approach used to establish the non-benefit load for all rate cells. Additionally, new for this year, Section 16 summarizes the methodology and payment structure for the new NC Select Drug List Case Payments.

The users of this Rate Book are cautioned against relying solely on the data contained herein. DHHS and Mercer provide no guarantee, either written or implied, that this book is 100% accurate or error-free. Furthermore, projections outlined in this Rate Book are based upon the information and data available at a point in time and are subject to unforeseen and random events. Therefore, any projection must be interpreted as having a likely and potentially wide range of variability from the estimate. Any estimate or projection may not be used or relied upon by any other party or for any other purpose than for which it was issued by DHHS and Mercer. DHHS and Mercer are not responsible for the consequences of any unauthorized use.[2]

[2] These disclosures are made in accordance with the Actuarial Standards of Practice (ASOP) on Actuarial Communications (ASOP 41).

2 DATA SOURCES

Mercer used the Standard Plan encounter claims data from the DHHS Encounter Processing System (EPS), which were submitted by the PHPs and provided to Mercer by DHHS, to form the base data. This data is analyzed on a date of service (incurred) basis and includes service utilization experience from July 1, 2022 through June 30, 2024, paid through August 31, 2024. The data summarized in this Rate Book is limited to SFY 2024 (July 1, 2023 through June 30, 2024), which was used as the primary historical base data source for SFY 2026 capitation rate-setting.

As a part of the data summarization process, Mercer also analyzed eligibility information from the member extract file provided by DHHS through August 2024. Eligibility information was used to categorize recipient-level claims experience and encounters into the populations outlined in Section 4. This information was also used to summarize the member month (MM) information reflected in various summaries throughout the Rate Book.

Mercer leveraged other data sources supplied by DHHS to calculate specific data adjustments, such as:

- Financial reports completed by the PHPs through December 2024.
- Encounter data questionnaires completed by the PHPs in December 2024.
- SFY 2025 data through December 2024 for the Expansion population to review emerging experience for this new population and refine capitation rate assumptions as described in Section 13.
- Enrollment projections through SFY 2026 provided by the State for the Non-Expansion population. This supplemental data was used to develop the expected acuity impact of the continuous coverage unwinding process as described in Section 12.
- Emerging weight loss drug cost and utilization data through March 2025 from the North Carolina Association of Health Plans to inform assumptions related to the projected costs of glucagon-like peptide-1 (GLP-1) weight loss coverage.

Mercer reviewed the summarized data in compliance with the Actuarial Standard of Practice (ASOP) on data quality (ASOP 23), which included checks for completeness of data, accuracy of the data, and consistency of data across data sources and years, including comparisons to financial reports provided by the PHPs. However, Mercer did not perform a complete audit. Based on Mercer's review of the data, the data is found to be complete and reasonable for use in rate development.

The users of this Rate Book are cautioned that direct comparisons cannot be made between the information in the data summaries and raw claims data. The data received was summarized on a date of service (incurred) basis, and Mercer applied additional adjustments to the summarized raw data. Mercer has used and relied upon information supplied by both DHHS and the Standard Plan PHPs. The aforementioned parties are solely responsible for the validity and completeness of these supplied data and information.

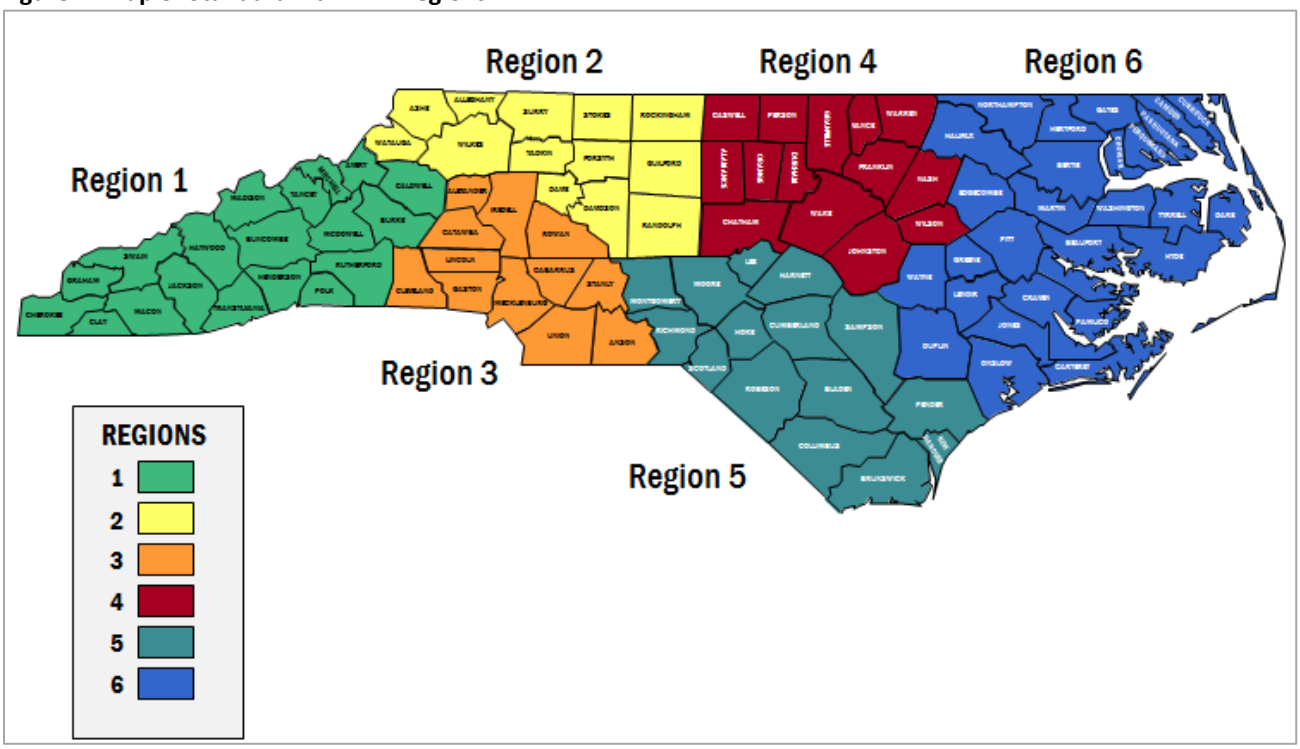
3 PHP REGIONS

DHHS has six regions for the Standard Plan program. Table 1 outlines the counties included in each of the six PHP regions and Figure 1 illustrates the PHP regions in map format. Base data contained in this Rate Book are summarized and developed by these six regions.

Table 1: List of Counties in Standard Plan PHP Regions

PHP Regions	Counties
Region 1	Avery, Buncombe, Burke, Caldwell, Cherokee, Clay, Graham, Haywood, Henderson, Jackson, Macon, Madison, McDowell, Mitchell, Polk, Rutherford, Swain, Transylvania, Yancey
Region 2	Alleghany, Ashe, Davidson, Davie, Forsyth, Guilford, Randolph, Rockingham, Stokes, Surry, Watauga, Wilkes, Yadkin
Region 3	Alexander, Anson, Cabarrus, Catawba, Cleveland, Gaston, Iredell, Lincoln, Mecklenburg, Rowan, Stanly, Union
Region 4	Alamance, Caswell, Chatham, Durham, Franklin, Granville, Johnston, Nash, Orange, Person, Vance, Wake, Warren, Wilson
Region 5	Bladen, Brunswick, Columbus, Cumberland, Harnett, Hoke, Lee, Montgomery, Moore, New Hanover, Pender, Richmond, Robeson, Sampson, Scotland
Region 6	Beaufort, Bertie, Camden, Carteret, Chowan, Craven, Currituck, Dare, Duplin, Edgecombe, Gates, Greene, Halifax, Hertford, Hyde, Jones, Lenoir, Martin, Northampton, Onslow, Pamlico, Pasquotank, Perquimans, Pitt, Tyrrell, Washington, Wayne

Figure 1: Map of Standard Plan PHP Regions



4 POPULATION GROUPINGS

For SFY 2026, DHHS will continue to reimburse PHPs using full-risk capitation payments for eligible populations. For purposes of base data development, Mercer maintained rate cells for the Standard Plan population consistent with SFY 2025 capitation rates. These rate cells account for material cost differences among populations. Since the managed care populations have a choice of PHPs, the rate cell structure is intended to differentiate payments to PHPs in which disproportionate enrollment of certain populations may occur. In addition, the State will continue to risk adjust the SFY 2026 Non-Expansion capitation rates except for TANF, Newborns, as risk adjustment accounts for much of the age/gender risk within a population and differentiates payments to PHPs based on their enrolled population risk profile. Alongside the monthly per-member capitation rates, DHHS will continue to make a one-time Maternity Event payment that will cover prenatal, delivery, and postpartum care associated with the maternity events for each pregnant person.

Coverage for the new adult group adults ages 19 years old who are at or below 133% of the Federal Poverty Level began on December 1, 2023. DHHS added rate cells during SFY 2024, which will continue to be relied on for purposes of establishing the SFY 2026 capitation rates. The State will begin risk-adjusting the SFY 2026 Expansion rates, effective October 1, 2025.

DHHS will also be implementing the NC Select Drug Case Payment, effective July 1, 2025. These case payments will be a one-time payment to a PHP administering one of a defined list of high-cost pharmacy treatments, where the payment reflects the estimated amount of the statutory federal rebate of the administered drug. This case rate is a separate payment that may be made for any Standard Plan covered member and is described in Section 16.

The final rate cell structure for the Standard Plan Non-Expansion and Expansion populations is outlined in Section 4.1.

4.1 Standard Plan Population

The information summarized in this Rate Book is specific to the Standard Plan population. As outlined in the Standard Plan PHP Contract, the State will enroll into the PHPs non-dual beneficiaries who do not meet eligibility for the Behavioral Health (BH)/Intellectual and Developmental Disabilities (I/DD) Tailored Plan, and those who do meet BH I/DD Tailored Plan eligibility, but choose to enroll in a Standard Plan.[3] Beneficiaries in other excluded or delayed populations will not be included in the Standard Plan rates. Members of federally recognized tribes and other beneficiaries eligible for Indian Health Services (IHS) are also exempt from mandatory enrollment in managed care.

Rates for the Standard Plan population are summarized and developed for the following rate cells. Medicaid Expansion populations do not yet have sufficient historical data available for the purposes of base data summarization. Age is determined based on the first day of the month.

- Aged, Blind, and Disabled (ABD), All Ages
- TANF and Other Related Newborns (Ages <1 Year)
- TANF and Other Related Children (Ages 1 Year–20 Years)
- TANF and Other Related Adults (Ages 21+ Years)
- Maternity Event, All Ages
- Newly Eligible, Ages 19 Years–24 Years
- Newly Eligible, Ages 25 Years–34 Years

[3] Members eligible for the BH I/DD Tailored Plan, who are not in a group excluded from managed care, maintain the option to enroll with the Standard Plan. See the Final Policy Guidance for more information (*https://www.ncdhhs.gov/bh-idd-tp-finalpolicyguidance-final-20190318*)

- Newly Eligible, Ages 35 Years–44 Years
- Newly Eligible, Ages 45 Years–64 Years
- NC Select Drug List Case Payments (see Section 16)

The table below outlines the logic used to summarize the broader categories of aid (COAs) for the Standard Plan population; this includes information on detailed eligibility codes and subpopulation groups. Individuals otherwise identified for a future managed care or excluded population were not included as part of the Standard Plan population.

Table 2: Standard Plan Population Criteria[4]

COA	Detailed Population Group	Program Aid Code/Eligibility Code
ABD[5]	Aged	MAACY, MAAGN, MAANN, SAACN, SAACY
	Blind	MABCY, MABGN, MABGY, MABNN
	Disabled	MADCY, MADGN, MADNN, SADCN, SADCY
TANF and Other Related Children/Adults[6]	Aid to Families with Dependent Children	MAFCN, MAFGN, MAFNN
	Pregnant Women	MPWIN, MPWNN
	Infants and Children	MICGN, MICNN
	Breast and Cervical Cancer	MAFWN, MAFTN
	Medicaid-Children's Health Insurance Program (MCHIP)	MIC1N
	NC Health Choice (transitioned to MCHIP as of April 2023)	MICAN, MICJN, MICKN, MICSN
Maternity Event	N/A	Cost summarized for pregnancy-related services for beneficiaries with a qualifying birth event. The birth event is identified by current procedural terminology (CPT) codes or diagnosis-related groups (DRGs). Prenatal services are included eight full months prior to the birth event, and postpartum services are included for two full months following the qualifying birth event. Please see Appendix A for the detailed logic used to identify these pregnancy-related services. Pregnancy medical home (PMH) incentive payments are included in the Maternity Event Payment (see Step 3 in Appendix A).
Newly Eligible	Newly Eligible, All Ages	MXPNN, MXPGN

Members of federally recognized tribes and other beneficiaries eligible for IHS are eligible to participate in Medicaid managed care but are not required to enroll with PHPs. Members may voluntarily enroll in PHPs on an opt-in basis and may disenroll without cause at any time. Claims and eligibility associated with beneficiaries with a tribal code who opted into the Standard Plan during SFY 2024 are reflected in the base data summarized in this document.

The BH I/DD Tailored Plan launched on July 1, 2024. Prior to the Tailored Plan launch, beneficiaries qualifying for the BH I/DD Tailored Plan were an exempt population, with a choice of the legacy delivery system (default) or

[4] For specific program eligibility requirements, refer to the NC Basic Medicaid Eligibility Requirements Chart. Accessed on March 20, 2025 at the following link: *https://policies.ncdhhs.gov/wp-content/uploads/MEDICAID-ELIGIBILITY_9-9-2024.pdf*
[5] ABD non-dual beneficiaries are included in the Standard Plan. Dual eligibles are excluded.
[6] References and data impacts for the TANF population throughout this Rate Book include the "Other Related Children and Adult" categories defined in Table 2.

Standard Plan enrollment.[7] As the SFY 2024 encounter data reflects actual Standard Plan managed care experience, the data inherently captures the historical enrollment of any Tailored Plan exempt beneficiaries within the Standard Plan.

Additionally, DHHS developed a set of criteria that, when met, would qualify a beneficiary as eligible for the BH I/DD Tailored Plan.[8]

4.2 Future Managed Care Populations

Following initial implementation of managed care and the rollout to the Standard Plan population, additional populations will be phased in over a five-year period, pursuant to Session Law (SL) 2015-245,[9] as amended. The table below outlines the treatment of each of these population cohorts for Contract Year 5. As mentioned, detailed cost and utilization information for populations excluded from Standard Plan enrollment are outside the scope of this Rate Book.

Table 3: Future Managed Care Population Cohorts

Special Population	Standard Plan PHP Status for Contract Year 4
Standard Plan	Mandatory
BH I/DD Tailored Plan Non-Dual Eligibles[10]	Exempt until BH I/DD Tailored Plan launched in July 2024; default to BH I/DD Tailored Plan with choice to opt into Standard Plan enrollment
Dual Eligibles in Innovations/Traumatic Brain Injury (TBI) Waivers	Excluded
Foster Children, Adopted Children, and Former Foster Care Children up to age 26 years	Excluded until launch of Children and Families Specialty Plan in December 2025
Medicaid-only beneficiaries receiving long-stay nursing home services	If an individual enrolled in a PHP resides, or is likely to reside, in a nursing facility (NF) for 90 days or more, such individual shall be disenrolled from the PHP on the first day of the month following the ninetieth day of the stay and enrolled in the Medicaid Direct program. DHHS considers the following beneficiaries to be temporarily excluded until the beneficiary is discharged and determined eligible for managed care: (i) Beneficiaries residing in a State-owned neuro-medical center operated by the Division of State Operated Healthcare Facilities or a veterans' home operated by the Department of Military and Veterans Affairs (DMVA) at Medicaid Managed Care implementation. (ii) Beneficiaries determined eligible for and transferred for treatment in a State-owned neuro-medical center or DMVA-operated veterans' home.
Dual Eligibles with full Medicaid benefits	Excluded

Please see Appendix B — Other Population Eligibility Criteria for detailed data summarization logic for the identification of future managed care populations.

[7] Beneficiaries enrolled in the Traumatic Brain Injury (TBI) and Innovations waivers are prohibited from enrolling in the Standard Plan without first disenrolling from the waiver.

[10] Beneficiaries enrolled in the TBI and Innovations waivers are prohibited from enrolling in the Standard Plan without first disenrolling from the waiver. Beneficiaries enrolled in the Transitions to Community Living (TCL) program must first leave the TCL program before they may opt into the Standard Plan.

4.3 Excluded Populations

The following populations are permanently excluded from PHP enrollment, pursuant to North Carolina General Statute § 108D-40:[11]

- Beneficiaries eligible for Medicare, but not full Medicaid benefits, including beneficiaries in categories limited to Medicare cost-sharing programs
- Beneficiaries enrolled in the Program of All-Inclusive Care for the Elderly (PACE)
- Beneficiaries enrolled in North Carolina's Health Insurance Premium Payment Program
- Beneficiaries enrolled in Medicaid for emergency services only
- Medically needy beneficiaries
- Beneficiaries eligible for family planning services only
- Beneficiaries who are inmates of prisons
- Presumptively eligible beneficiaries, during the period of presumptive eligibility
- Beneficiaries being served through the Community Alternatives Program for Children (CAP/C) waiver
- Beneficiaries being served through the Community Alternatives Program for Disabled Adults (CAP/DA) waiver
- Beneficiaries in the uninsured Coronavirus Disease 2019 (COVID-19) testing group added during the PHE
- Beneficiaries enrolled in the Innovations and TBI waivers will be enrolled in BH I/DD Tailored Plans unless they are a member of a federally recognized tribe or eligible for IHS
- Refugees receiving coverage through the Refugee Medical Assistance (MA) program

Please see Appendix B — Other Population Eligibility Criteria for the detailed data summarization logic for the identification of these excluded populations.

5 SERVICE CATEGORIES

DHHS reimburses the Standard Plan PHPs using full-risk capitation payments for eligible services. Mercer summarized the cost and utilization information from the Standard Plan encounter data into major categories of service. To align with reporting requirements, the COS groupings are based on the logic put forth in the PHP Financial Reporting Manual. Please see Appendix D for the detailed coding logic and corresponding Sort Sequence reference numbers for the categories that have been combined. The Sort Sequence from the PHP Financial Reporting Manual identifies the order of the hierarchy used to categorize each claim based on various identification methods as summarized in Appendix D. This service mapping approach is consistent with the SFY 2025 Rate Book.

The table below shows how the service categories in the Standard Plan Financial Reporting Manual were grouped for purposes of this Rate Book and the exhibits in Section 7. Please refer to the PHP Contract for details on the covered and excluded services for the Standard Plan program.

Table 4: Standard Plan COS Groupings

COS Grouping	Financial Reporting Manual COS	Sort Sequence	Unit Type
Inpatient — Physical Health (PH)	Inpatient PH	26	Admissions
Inpatient — BH	Inpatient BH	25, D18, D19, D23	Days
Outpatient Hospital — Facility	Outpatient Hospital — Facility	29, D20	Visits
Outpatient Hospital — Professional	Outpatient Hospital — Professional	18, D15, D16	Visits
Emergency Room — PH	Emergency Room — PH (Professional) Emergency Room — PH (Institutional)	7, 9	Visits
Emergency Room — BH	Emergency Room — BH (Professional) Emergency Room — BH (Institutional)	6, 8	Visits
Physician — Primary Care	Physician — Primary Care	21	Visits
Physician — Specialty Care	Physician — Specialty Care	24, D06	Visits
Federally Qualified Health Center (FQHC)/Rural Health Clinic (RHC)	FQHC/RHC	18, 19	Visits
Other Clinic	Other Clinic	20, D17	Visits
Family Planning Services	Family Planning Services	4	Visits
Other Professional — PH	Other Professional — PH	35, D30	Visits
Other Professional — BH	Other Professional — BH	34, D29	Visits
Therapies — Physical Therapy (PT)/Occupational Therapy (OT)/Speech Therapy (ST)	Therapies — PT/OT/ST	23, D08, D11	Visits
Prescribed Drugs	Prescribed Drugs	5, D25	Prescriptions
Long-Term Services and Supports (LTSS) Services[12]	LTSS Services	32, D14, D22	Procedure Count
Durable Medical Equipment (DME)	DME	33, D09, D10, D26	Procedure Count
Laboratory and X-Ray	Laboratory/Radiology	31, D21, D24	Procedure Count
Optical	Optical	30, D04	Procedure Count
Limited Dental Services	Limited Dental Services	16, D02	Procedure Count
Transportation — Emergency	Emergency Transportation	27, D28	Claim Count
Transportation — Non-Emergency	Non-Emergency Medical Transportation (NEMT)	28, D27	Claim Count
Other Services — PH	Other Services — PH	D03, D05, D07, D32	Units

[12] See Appendix C for a SFY 2024 PMPM table with further delineation of LTSS services.

COS Grouping	Financial Reporting Manual COS	Sort Sequence	Unit Type
Other Services — BH	Other Services — BH	D01, D12, D13, D31	Units
Advanced Medical Home (AMH) Payments	AMH Payments — Tiers 1, 2, and 3 base	10, 12	Claim Count
Care Management for At-Risk Children (CMARC) Payments	CMARC	15	Claim Count
Care Management for High-Risk Pregnancy (CMHRP) Payments	CMHRP	16	Claim Count

Note: Mercer included additional logic to differentiate between the AMH and CM payments based on the required paid amounts and State COS Code 0093 from the EPS. CMARC and CMHRP payments are identified by $4.56 and $4.96, respectively; AMH base payments include paid amounts of $2.50 and $5.00 within State COS Code 0093.

DHHS has approved in lieu of services (ILOS) offered in the Standard Plan. These services are included in the base data development and total approximately $3.0 million across all PHPs for SFY 2024.

Covered services excluded from PHPs and continued under fee-for-service (FFS) or paid for outside of capitation are summarized below. Any observed experience for these services within the encounter data was removed as part of the base data development process:

- Service costs associated with the Healthy Opportunities Pilot Program
- Services provided directly by Children's Developmental Services Agencies (CDSAs), as well as services rendered by providers who contract with a CDSA
- Dental services not identified in the COS table above
- Services provided directly by local education agencies
- Optical services for eyeglasses frames, lenses, lens treatments, and fabrication are considered non-covered services in this Rate Book

Appendix D contains detailed coding logic used to define all detailed categories noted above.

6 BASE DATA ADJUSTMENTS

Mercer needed to perform analyses and adjustments to appropriately estimate the fully incurred SFY 2024 encounter data attributable to service expenses that are at risk and allowable based on generally accepted actuarial principles and federal regulations. This section provides an overview of each of the adjustments Mercer made to the data sources summarized in this report. These adjustments are reflected in the exhibits shown in Section 7.

6.1 Non-Covered Populations and Services

The encounter data extract used for base data development provided Mercer with recipient-level detail. Each encounter was cross-referenced to the eligibility information in the member extract file provided by DHHS to categorize the claims experience into the populations outlined in Section 4.

As an initial data processing step, all encounter data submitted by a Standard Plan in the EPS was pared down with two limitations. First, the data set was limited to only non-Expansion populations for purposes of data summarization for the base data exhibits and the capitation rate development process. Second, as described prior, encounters relating to enhanced AMH care management payments (but not AMH base payments or LHD medical home payments) were removed as consideration for these expenses will be included in the non-benefit portion of the capitation rates. These exclusions decreased the overall data set by 11.1% and 1.8%, respectively.

To the extent other populations not part of the Standard Plan contract coverage responsibility were identified in the encounter data, these encounters were also excluded from the SFY 2024 base data utilized by Mercer for this report and subsequently will be excluded from consideration for SFY 2026 capitation rate development.

These excluded encounters are generally attributable to instances in which an individual received a retroactive eligibility determination after the encounter was accepted. For example, Mercer found encounter records for populations that were noted as dually eligible for Medicare and Medicaid based on the August 2024 extract. This was a determination retroactive to the period of the encounter record. Also, the corresponding eligibility record for the given month was noted as not having an enrolled PHP, which aligned with DHHS expectations for how these instances of retroactive disenrollment from the Standard Plan should be handled within the EPS and eligibility systems.

The impact of the removal of claims for encounters associated with non-covered populations is $38.8 million, or 0.5%. Since the eligibility record is updated whenever changes are made, no member month exclusions were needed as the eligibility base data is already reflective of only the appropriately covered populations. Mercer also made an additional removal for a relatively small volume of encounters where the eligibility record was missing or deemed incomplete. This additional exclusion removed $3.5 million, or 0.0% of encounter dollars. These two exclusions lead to a total impact of 0.5% to the overall encounter claims data extract in addition to the 11.1% and 1.8% previously noted.

As discussed in Section 4.1, the data captures the enrollment of any BH I/DD Tailored Plan exempt beneficiaries that have opted into the Standard Plan, as well as any Tribal members who may have opted in. This opt-in experience was not removed as part of these exclusions.

Finally, Mercer evaluated the encounter data for services that remain outside of the capitation rates as described in Section 5. The impact of this adjustment is summarized by rate cell below. The encounters identified for this exclusion were for services provided directly by CDSAs or rendered by providers who contract with a CDSA, using claim type “V” or modifier “TL” on a therapy service encounter, and Healthy Opportunities Pilot (HOP) services identified by State COS in the EPS of 0121, 0122, 0123, 0124, 0125, and 0129.

The table below summarizes the excluded dollars for the services identified as not covered through the Standard Plan program. Of the total, $70.2 million are HOP services.

Table 5: Exclusion for Non-Covered Services

COA	SFY 2024 Dollar Adjustment
ABD	$(18,009,922)
TANF, Newborns (<1 Year)	$(1,217,581)
TANF, Children (1 Year–20 Years)	$(29,775,094)
TANF, Adults (21+ Years)	$(21,254,553)
Maternity Event	$(40,740)
Total	**$(70,297,891)**

6.2 Value-Added Services

Value-added services are not allowed to be included in the base data development for rate-setting as outlined in federal regulations. The PHPs provided feedback to DHHS and Mercer that select value-added services were included in the encounter data submissions. Mercer identified these services via State COS 0091 in the EPS, compared to feedback received from the PHPs related to value-added services, and excluded applicable encounters, as appropriate. The impact of this adjustment is outlined in the table below.

Table 6: Exclusion of Value-Added Services

COA	SFY 2024 Dollar Adjustment
ABD	$(220,200)
TANF, Newborns (<1 Year)	$(157,792)
TANF, Children (1 Year–20 Years)	$(490,440)
TANF, Adults (21+ Years)	$(724,668)
Maternity Event	$(2,149)
Total	**$(1,595,249)**

6.3 Value-Based Payments

Through the encounter data review process, Mercer identified information on value-based payments (VBPs) for covered services. Based on guidance from DHHS on encounter submissions for VBPs, some VBP records, specifically those for provider-based incentive payments, do not necessitate including a valid Medicaid ID on the encounter. Mercer applied an adjustment to capture payments related to covered services within the SFY 2024 encounter base data. There is no net impact to this adjustment. The total VBP encounter records were removed in the non-covered population step, as they are not attributable to a specific member, and were subsequently reallocated as a part of this adjustment step. These encounter claim dollars were reallocated at the PHP level based on the overall claims level for each rate cell. The reallocation's impact is summarized below.

Table 7: VBP Adjustment

COA	SFY 2024 Dollar Adjustment
ABD	$13,437
TANF, Newborns (<1 Year)	$4,920
TANF, Children (1 Year–20 Years)	$14,265
TANF, Adults (21+ Years)	$10,468
Maternity Event	$3,109
Total	**$46,200**

6.4 Encounter Data for Separate Payment Terms

Mercer researched the encounter data submission and reporting guide to ensure an understanding of the information and base data provided by DHHS. Based on this review and information shared by the PHPs, Mercer confirmed that no encounter data was included for any separate payment terms associated with the SFY 2024 program period. Therefore, no adjustment was required for this program attribute.

6.5 Completion Factors

The summarized data in Section 7 includes encounter claims for dates of service for SFY 2024, paid through August 31, 2024. Mercer developed completion factors to estimate incurred but not reported claims (claims not yet adjudicated by the EPS). To estimate completion, Mercer performed an incurred but not paid (IBNP) analysis on the historical encounter data provided, with payment runout through August 31, 2024. The goal of this analysis was to estimate a total SFY 2024 incurred expense level for each broad COS (inpatient, outpatient, professional, pharmacy, and other) based on PHP-reported information within the encounter data. This independent IBNP review was performed using traditional actuarial reserving methods and reflected each PHP's payment patterns.

The following table summarizes the average completion factor applied to each COS for the SFY 2024 encounter data time period.

Table 8: Completion Factors

COS	SFY 2024 Average Completion Factor
Inpatient — PH	1.057
Inpatient — BH	1.073
Outpatient Hospital — Facility	1.028
Outpatient Hospital — Professional	1.032
Emergency Room — PH	1.028
Emergency Room — BH	1.029
Physician — Primary Care	1.023
Physician — Specialty Care	1.023
FQHC/RHC	1.023
Other Clinic	1.023
Family Planning Services	1.022
Other Professional — PH	1.023
Other Professional — BH	1.025
Therapies — PT/OT/ST	1.025
Prescribed Drugs	1.010
LTSS Services	1.050
DME	1.053
Laboratory and X-Ray	1.052
Optical	1.052
Limited Dental Services	1.054
Transportation — Emergency	1.049
Transportation — Non-Emergency	1.052
Other Services — PH	1.052
Other Services — BH	1.057
AMH Base Payments	1.000
CMARC	1.000

COS	SFY 2024 Average Completion Factor
CMHRP	1.000
Total Standard Plan	**1.030**

6.6 Encounter Data Under-Reporting Adjustment

After application of the completion factors to the encounter data as outlined in the prior section, Mercer further evaluated differences between the total estimated incurred service expenses in the encounter data and an estimated total incurred service expense view based on the September 2024 Standard Plan financial report submissions excluding separate payment terms, AMH and LHD provider care management, value-added services, sanctions, penalties, and interest. This was also informed by a question-and-answer process performed by DHHS and Mercer with the PHPs.

Differences between encounter data and financial reports from health plans exist for various reasons, including the following:

- Payment timing — Mercer has observed a timing difference, in which payments made by the PHP will be reflected in financial reports sooner than the corresponding encounter may be submitted and accepted in the EPS. The underreporting adjustment is intended to capture delays associated with encounter data submission and acceptance.
- Payments outside of the encounter system — As outlined earlier, some services may be paid outside of the encounter data system, and therefore show up as a service expense in the financial reports, but not have a corresponding encounter. Some common examples of this are sub-capitated and VBP arrangements. The underreporting adjustment addresses this difference.

To address differences between Mercer's total SFY 2024 incurred estimates based on PHP financial reports and the fully completed and adjusted encounter data reflective of the adjustments outlined in Sections 6.1 through 6.5, Mercer made an additional adjustment to bring the encounter data up to the total estimated incurred costs for each PHP as estimated based on the September 2024 financial reports. A summary of the adjustment factors applied may be found in the following table.

Table 9: Impact of Under-Reporting Adjustment

COS	Combined COS	SFY 2024 Percentage Adjustment
Inpatient — PH	Inpatient	0.9%
Inpatient — BH	Inpatient	0.9%
Outpatient Hospital — Facility	Outpatient Hospital	1.0%
Outpatient Hospital — Professional	Outpatient Hospital	1.0%
Emergency Room — PH	Outpatient Hospital	1.0%
Emergency Room — BH	Outpatient Hospital	1.0%
Physician — Primary Care	Professional	1.0%
Physician — Specialty Care	Professional	1.0%
FQHC/RHC	Professional	0.9%
Other Clinic	Professional	0.9%
Family Planning Services	Professional	0.9%
Other Professional — PH	Professional	1.0%
Other Professional — BH	Professional	1.0%
Therapies — PT/OT/ST	Professional	1.0%
Prescribed Drugs	Prescribed Drugs	1.0%
LTSS Services	Other	0.9%
DME	Other	0.9%

COS	Combined COS	SFY 2024 Percentage Adjustment
Laboratory and X-Ray	Other	0.9%
Optical	Other	1.1%
Limited Dental Services	Other	0.9%
Transportation — Emergency	Other	1.0%
Transportation — Non-Emergency	Other	1.0%
Other Services — PH	Other	0.9%
Other Services — BH	Other	1.0%
AMH Base Payments	AMH and LHD Base	0.0%
CMARC	AMH and LHD Base	0.0%
CMHRP	AMH and LHD Base	0.0%
Total Standard Plan	**N/A**	**1.0%**

6.7 Consideration for Additional Deliveries after Data Period

In addition to the budget-neutral maternity adjustment discussed in "Appendix A — Maternity Event Criteria," adjustments were applied to delivery counts to account for SFY 2024 delivery claims paid after the August 2024 runout period. Factors were based on the review of SFY 2023 historical data and the impact of a longer runout period. This adjustment resulted in a 1.6% increase in deliveries used to calculate the SFY 2024 maternity event payments.

6.8 Institutions for Mental Diseases Adjustment

On May 6, 2016, the Centers for Medicare & Medicaid Services (CMS) issued the Managed Care Final Rule that included provisions regarding the treatment of utilization at Institutions for Mental Diseases (IMDs) in capitation payment and rate-setting. Specifically, provision § 438.6(e) of the Final Rule states the following, "[…] the State may make a monthly capitation payment to an MCO or PIHP for an enrollee aged 21–64 receiving inpatient treatment in an Institution for Mental Diseases, as defined in § 435.10.10 of this chapter, so long as the facility is a hospital providing psychiatric or substance use disorder (SUD) inpatient care or a sub-acute facility providing psychiatric or SUD crisis residential services, and length of stay in the IMD is for a short term stay of no more than 15 days during the period of the monthly capitation payment."

DHHS received authority under the 1115 Waiver Demonstration for relief of the 15-day limitation for services delivered in an IMD for SUD treatment. Mercer observed utilization for IMD facilities throughout the base data. Therefore, Mercer evaluated the IMD experience reflected in the base data regarding the 15-day limitation for non-SUD psychiatric care.

Mercer identified IMD experience for members who are ages 21 years–64 years as inpatient services provided at IMD providers based on a National Provider Identifier list provided by DHHS. The amount attributable to members with more than 15 days within a given month for non-SUD stays has been excluded from the data.

Another component of § 438.6(e) is that states "must price utilization at the cost of the same services through providers included under the State Plan." As such, Mercer repriced the remaining IMD days, after the exclusion noted above, at the contractual minimum Inpatient BH, non-IMD per diem rate.

For SFY 2024, the impact of this IMD adjustment is a 0.0% change to the Standard Plan encounter data.

7 SFY 2024 BASE DATA EXHIBITS

Mercer summarized the base data experience for the Standard Plan mandatory populations in the following exhibits. These summaries reflect the base data adjustments outlined in Section 6. Medicaid Expansion encounter data for SFY 2024 does not yet reflect a full year, so these exhibits do not include any summaries for the newly eligible adult rate cells.

The top of each exhibit includes the following identifying information:

- **Time Period**: SFY 2024.
- **Region**: Regional breakouts based on Section 3 of the narrative.
- **COA**: Specific COA group for the Standard Plan population as defined in Section 4.1 of the narrative:
  - ABD
  - TANF and Other Related Children/Adults
  - Maternity Event
  - All COAs combined
- **Age Grouping**: Specific age groups as defined in Section 4.1 of the narrative.

Below the population criteria is information on the following metrics associated with the population selections:

- **MMs/Deliveries:** MMs reflect a count of monthly eligibles for the historical time period; deliveries represent the count of qualifying birth events related to the Maternity Event payment.
- **Average Monthly Members/Deliveries:** MMs or deliveries divided by 12.
- **Eligibles:** Reflects a unique count of eligibles for the time period and population indicated.
- **COS:** As described in Section 5, each of the covered services is listed.
- **Incurred Claims:** Amount paid for each service line item based on the paid amount field included in the encounter data provided by the PHPs; these amounts are based on the date of service and reflect the applicable data adjustments outlined in Section 6.
- **Utilization:** Utilization for each service line item. This represents the number of visits, days, services, or scripts for each category, as reported in the data, after the application of adjustments outlined in Section 6; see Table 4 in Section 5 for the unit types used to define utilization for the various service categories.
- **Users:** Unique user count for each service. The COA-specific exhibits by region reflect unique user counts, whereas the “all COAs combined” view reflects the sum of the unique users from the COA-specific exhibits. This may result in minimal duplication of users to the extent an individual changes age groups or eligibility categories during the year.
- **Utilization per 1,000:** Annual utilization for each service divided by total MMs multiplied by 12,000.
- **Unit Cost:** Average cost of each service line item; incurred claims divided by the utilization of services delivered.
- **Per Member Per Month (PMPM)/Payment:** PMPM is the incurred claims divided by total MMs; the Maternity Event payment is the incurred claims divided by the deliveries.

8 CAPITATION RATE DEVELOPMENT

The rate-setting methodology is based on generally accepted actuarial principles and best practices with consideration of rate-setting approaches from other state Medicaid managed care programs. The rate-setting process and related documentation comply with the CMS regulations outlined in 42 CFR §438.4 and were developed in accordance with applicable law and regulations, including the ASOPs. The process was developed to support the financial-related objectives of DHHS' new program in order to:

- Advance high-value care
- Establish a sustainable program with predictable costs

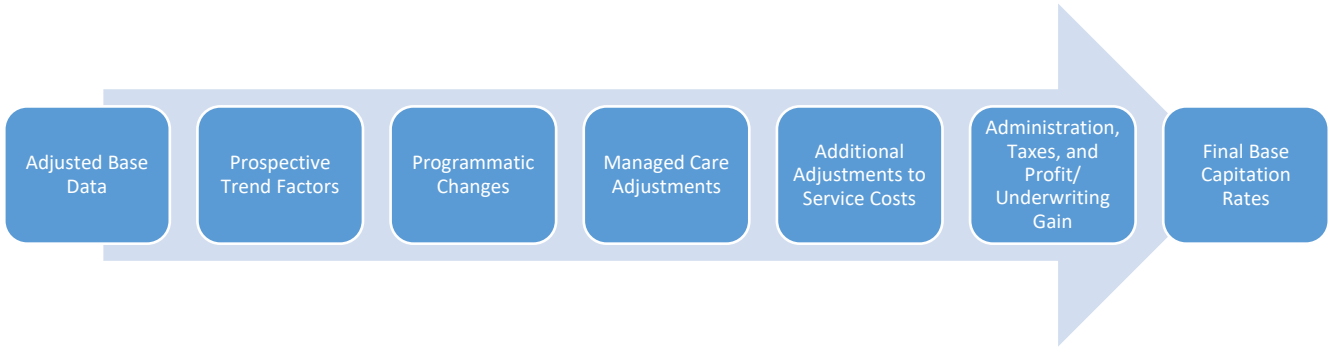
The capitation rates are meant to provide a reimbursement structure that will match payment to the expected financial risk of the managed care program designed for the State Medicaid population.

The rate-setting process is the means for determining the PMPM capitation payments DHHS will pay to the PHPs for each beneficiary enrolled in the program, regardless of the amount of future services that beneficiary receives. Generally, this process involves summarizing historical claims and eligibility data that represent the covered populations and services (Sections 2 through 7) and projecting future medical claims costs on a PMPM basis into the rating period (Sections 8 through 12). Section 13 provides details on the approach used to project enrollment and medical costs for Expansion populations. Consideration for administrative allowances and profit/underwriting gain or risk margin are added to the expected medical costs to arrive at the base capitation rates for each rate cell (Section 14). Capitation rate development summaries are included for each applicable rate cell in Section 15. Additionally, the separate NC Select Drug List Case Payment methodology and rates are summarized in Section 16.

The overall rate-setting approach is based on the foundational steps outlined below. Mercer has refined the approach to best match the Medicaid managed care program design and North Carolina's healthcare landscape.

When reviewing Sections 8 through 14, please note that the MMs and weighted total impacts reflect SFY 2026 enrollment for Standard Plan eligible members, as projected by DHHS, and adjusted for the unwinding of the PHE and associated MOE requirements, as well as enrollment projections surrounding the Expansion population. Delivery counts were not provided in the enrollment counts and projections provided by DHHS; therefore, all weighted impacts rely on SFY 2024 delivery information, adjusted to account for the runout consideration described in Section 6.7. These MMs were utilized to estimate total program averages where appropriate and did not have any upward or downward impact on the service level adjustments outlined in these sections.

Figure 2: Rate-Setting Methodology



9 TREND ASSUMPTIONS

Medical trend is the projection of utilization and unit cost changes over time. A trend factor is necessary to estimate the expenses of providing healthcare services in the SFY 2026 rating period. Per 42 CFR §438.5(b)(2) of the CMS Managed Care Final Rule (Final Rule), in setting actuarially sound rates, the actuary must "develop and apply trend factors, including cost and utilization, to base data that are developed from actual experience of the Medicaid population or a similar population in accordance with generally accepted actuarial practices and principles." Further discussion around Expansion rate-setting and how Expansion population trends were established can be found in Section 13.

9.1 Trend Development Methodology

To develop trends for the SFY 2026 rating period, Mercer reviewed various sources of data, namely, SFY 2024 PHP encounter data, national Medicaid trends, available CMS economic indices, and other market data. The data was analyzed on a rolling average basis to evaluate changes in historical cost and utilization patterns while smoothing the influence of historical program changes, significant outliers, and seasonality. Regression models were also created to fit the historical data to a linear equation by rate cell and service category. The slope of the fitted line from the historical data was evaluated to inform prospective trend assumptions. As secondary sources, Mercer reviewed CMS economic indices and Consumer Price Index (CPI) data.

Unit cost and utilization trend factors were developed to form an overall PMPM trend for each major COS. Similar service categories were aggregated and reviewed on a Statewide and regional basis. Outside of pharmacy trends, Mercer evaluated but did not vary regional trend assumptions. Further delineation was warranted for Prescription Drugs based on historical drug utilization and varying impacts of the expected prescription drug market changes. Prescription drugs make up roughly 29% of the SFY 2024 Standard Plan Non-Expansion base expenditures.

Since each rate cell has a different distribution of services, the trend assumption percentages translate to a different total PMPM impact by rate cell. The trend assumptions were applied from the midpoint of the SFY 2024 base data period to the midpoint of the contract period, a total of 24 months for all regions.

Unit cost trends for non-pharmacy services generally are lower than prior years, driven by increased reliance on actual Standard Plan encounter data rather than national indices for certain services. Although applicable Medicare market basket indices were still utilized for Inpatient, Outpatient, and Emergency Department services, these benchmarks were generally lower than prior years. For services that were tied to indices in prior years (i.e., FQHC, Emergency Transportation, and Skilled Nursing Facility [SNF]) actual encounter data and review of fee schedule changes were used to determine trend assumptions.

Utilization trends were developed by reviewing actual utilization metrics from the encounter data. By using this method, trends were generally established at the broad COS and rate cell level based on historical data, similar to unit cost trend development. Utilization trends assumed during SFY 2026 rate development generally reflect higher trends compared to prior years.

9.2 Overall Trend Assumptions

Mercer developed an annual trend assumption of approximately 4.6% to project the SFY 2024 base data to the contract period. The impact varies by COS and is captured in the table below. For additional context on the trend assumptions below, Mercer also offers the following information:

- Overall, final SFY 2026 trend assumptions reflect lower expected unit cost trends, driven by lower inflation levels within national indices and more reliance on observed cost trends within the Standard Plan encounter data compared to prior analyses. Utilization trend assumptions are higher than the prior year, reflective of review of SFY 2023 and SFY 2024 utilization metrics from Standard Plan encounters.

- Unit cost trends for hospital facility services were updated to reflect changes in CMS market indices.
- For other services that have relied on indexing in the past (FQHC/RHC and public ambulance), assumptions were updated to reflect actual unit cost trends observed. FQHC/RHC base payments are no longer annually inflated based on CMS indices as they were prior to the reimbursement changes outlined in Section 10.
- SNF unit cost trends were developed by reviewing the impact of the fee schedule effective January 1, 2025, with additional trend to the SFY 2026 period. This was blended with the other non-SNF LTSS services to develop overall LTSS trends. This change in methodology replaces the prior program change applied to the SNF COS.
- Mercer and its pharmacy subject matter experts have fully updated the trends for prescribed drugs to reflect known pipeline and marketplace changes, as well as updates to the State Preferred Drug List (PDL) as of April 1, 2025, and further proposed PDL changes. Additionally, physician-administered drug trends were evaluated as part of the trend development process and reflected as part of the pharmacy trends.
- SFY 2024 influenza, respiratory syncytial virus (RSV), and COVID-19 costs were compared to SFY 2023. No explicit adjustment was made regarding costs for these illnesses, as the SFY 2024 base data period is assumed to appropriately represent anticipated SFY 2026 cost levels.
- For the AMH and LHD Care Management categories of service, an annual utilization trend assumption of 1% has been applied to account for the expected increase in utilization to reflect the increasing uptake of these services expected in SFY 2026 relative to the base data experience.

Table 10: Overall Annual Trend Projections by Major Service Category[13]

COS	Unit Cost Trend	Utilization Trend	Total PMPM Trend	SFY 2024 Base PMPM[14]
Inpatient Hospital — PH	3.0%	0.6%	3.6%	$ 75.83
Inpatient Hospital — BH	3.0%	1.3%	4.4%	$2.28
Outpatient Hospital — Facility	3.0%	0.6%	3.6%	$27.91
Outpatient Hospital — Professional	1.8%	2.5%	4.4%	$5.41
Emergency Room — PH	3.0%	0.5%	3.5%	$36.49
Emergency Room — BH	3.0%	0.5%	3.5%	$ 0.80
Physician	0.7%	1.7%	2.4%	$57.41
FQHC/RHC	0.6%	3.2%	3.8%	$4.11
Prescription Drugs	5.5%	1.8%	7.4%	$109.56
LTSS Services	0.9%	2.5%	3.4%	$4.88
Other Acute Care	0.5%	3.9%	4.4%	$18.04
Transportation — Ambulance	1.0%	0.0%	1.0%	$3.92
Transportation — NEMT	0.5%	2.4%	2.9%	$1.34
AMH Payments/LHD Care Management	0.0%	1.0%	1.0%	$4.48
Total Standard Plan	**3.1%**	**1.4%**	**4.6%**	**$352.45**

The tables below show the trend factors by region and by population. The impact of trend is generally consistent across the regions; differences are driven by the variation in the utilization of services within each region.

[13] Physician trend projections were applied to the primary and specialty care physician, Therapies, Other Clinics, Other Professionals, and Family Planning Services COS lines. Other acute care trend projections were applied to the DME, Limited Dental Services, Optical, Other Services, and Laboratory and X-ray service lines.

[14] Overall adjusted base PMPM, inclusive of the proxy data set used for the Medicaid Expansion rate cells, based on SFY 2026 projected enrollment provided for reference to scale of overall COS relative to the total across all services.

Table 11: Overall Annual Trend Projections by PHP Region

Region	Unit Cost Trend	Utilization Trend	Total PMPM Trend
Region 1	3.0%	1.4%	4.5%
Region 2	3.2%	1.4%	4.7%
Region 3	3.2%	1.4%	4.6%
Region 4	3.1%	1.4%	4.6%
Region 5	3.1%	1.4%	4.6%
Region 6	3.2%	1.4%	4.6%
Total Standard Plan	**3.1%**	**1.4%**	**4.6%**

Table 12: Overall Annual Trend Projections by COA

COA	Unit Cost Trend	Utilization Trend	Total PMPM Trend
ABD	3.5%	1.4%	4.9%
TANF, Newborns (<1 Year)	2.4%	0.3%	2.7%
TANF, Children (1 Year–20 Years)	2.6%	1.8%	4.5%
TANF, Adults (21+ Years)	3.4%	1.6%	5.0%
Maternity Event	3.0%	0.0%	3.0%
Newly Eligible, Ages 19 Years–24 Years	3.4%	1.6%	5.0%
Newly Eligible, Ages 25 Years–34 Years	3.4%	1.6%	5.0%
Newly Eligible, Ages 35 Years–44 Years	3.4%	1.6%	5.0%
Newly Eligible, Ages 45 Years–64 Years	3.4%	1.6%	5.1%
Total Standard Plan	**3.1%**	**1.4%**	**4.6%**

The sections below provide additional commentary for certain service categories. For more detailed trend assumptions, see the Capitation Rate Development Exhibits in Section 15 of this Rate Book.

9.2.1 Prescription Drugs

Prescription drugs have the highest prospective trend assumptions in the capitation rates. Recent publications pertaining to the National Drug Trend and Pipeline suggest overall trends across specialty and traditional drug classes are expected to increase in the coming years. Further, prescription drug spend is expected to grow due to price growth, a robust specialty pipeline, and fewer brand name drugs losing patent protection, therefore delaying generic product launches.

Pharmacy trends require special consideration in rate-setting. Recently, pharmacy trends have been higher than other services covered under Medicaid programs. Higher trends are driven by large trends in specialty medications (driven by growth in therapies for inflammatory and oncology indications). Some of the underlying reasons for the higher specialty trends include expanded indications, direct-to-consumer advertising, and new drugs entering the market faster due to breakthrough therapy, fast-track, and accelerated approvals granted by the Food and Drug Administration (FDA). Higher trends are also driven by GLP-1 products for diabetes treatment, which are seeing a double-digit utilization growth. Further, manufacturers are pursuing additional indications for these drugs for adults and adolescents. Continued anticipated ramp up for GLP-1 drugs for treatment of weight loss, obstructive sleep apnea and cardiovascular risk reduction indications are reflected as a separate adjustment outside of trend. Please see Section 10.3.1 for more details.

Mercer incorporates marketplace intelligence into overall expected pharmacy trends for broad therapeutic categories based on the combination of the expectations for new traditional and specialty drug price fluctuations, as well as new generics and biosimilar introductions that Mercer routinely monitors. Pipeline drugs, which are drugs under development or discovery but not yet available in the marketplace, are not generally

reflected in the historical claims data, but are expected to impact utilization and cost within therapeutic categories during the rate year. Pipeline drugs were evaluated and accounted for in the pharmacy trend development based on the information available at the time rates were developed.

Mercer further included consideration of the April 1, 2025 NC Medicaid PDL available as of in the development of trends. For example, if DHHS prefers a branded product to a generic and/or biosimilar, Mercer does not assume the typical negative unit cost trend associated with the adoption of the generic and/or biosimilar product. Mercer also included consideration for costs related to COVID-19 treatment drugs (e.g., Paxlovid® and Lagevrio®) within pharmacy trends. These were previously covered under a federal assistance program but will be the responsibility of the PHPs during the entirety of SFY 2026.

As an additional step in the review process when developing the pharmacy trend assumptions, Mercer compared the forecasted pharmacy trend assumptions to the historical monthly program data, which reflects past experience with new high-cost drugs, as well as cost reductions due to generics available within the PDL or increased competition to ensure the forecast is reasonable compared to this historical experience. To further supplement the trend analysis, Mercer reviewed information from proprietary work with other states' Medicaid programs, publicly available reports on general health expenditure trends and Medicaid trends, and Bureau of Labor Statistics (BLS) CPI medical trend information. These sources provide a cross-section of information pertaining to the dynamics of the healthcare marketplace that help inform the process of developing prospective trend assumptions. This information combined with professional actuarial opinion was used to develop the final trend assumptions.

The top therapeutic classes contributing to the pharmacy trend include rheumatoid arthritis and other inflammatory conditions (specialty), diabetes (traditional), attention disorders (traditional), other specialty conditions (specialty), asthma (traditional), pulmonary (specialty), HIV (specialty), and oncology (specialty). Significant growth is expected in drug classes such as diabetes (traditional) rheumatoid arthritis and other inflammatory conditions (specialty), other specialty conditions (specialty), oncology (specialty), attention disorders (traditional), and injectable antipsychotic agents (specialty).

The top therapeutic categories for Standard Plan adults include diabetes (traditional) and rheumatoid arthritis and other inflammatory conditions (specialty). For Standard Plan children, the top therapeutic categories include attention disorders (traditional) and other specialty conditions (specialty).

There is a separate adjustment specific to emerging high-cost, low-utilization gene therapies not captured in the base data. Further information is provided in Section 10.2.2 for this adjustment and the pharmacy trends. Additionally, other office- or facility-administered drugs are captured in the Prescribed Drugs service category and trended based on Mercer's review of these service costs, to align with financial reporting instructions.

Overall, for the Standard Plan population in SFY 2026, Mercer is projecting specialty drug PMPM trends of 8.3% and traditional drug PMPM trends of 6.2%. For the Standard Plan population, specialty drug spend makes up approximately 51% of historical SFY 2024 drug spend. Mercer projects that specialty drug spend will make up approximately 53% of SFY 2026 spend. The TANF, Newborn rate cell is experiencing lower pharmacy trend due to the anticipated shift in the standard of care for the prevention of RSV.

9.2.2 Seasonal Influenza, RSV, and COVID-19

Since early 2020, COVID-19 has dominated respiratory disease activity in the US, with other respiratory viruses circulating at lower levels than usual. That changed beginning in 2022, as flu and RSV cases had a significant increase, especially among children. Mercer reviewed the SFY 2024 experience and determined it to be an appropriate base period compared to historical, pre-PHE norms for these seasonal conditions. Centers for Disease Control (CDC) information suggests the SFY 2026 time period may have similar levels of seasonal

respiratory infection rates compared to SFY 2024. Based on these findings, no adjustment was made to the SFY 2026 capitation rates.

Alongside this analysis, Mercer also reviewed the SFY 2024 COVID-19 treatment and testing costs compared to historical data. Based on this review, Mercer also confirmed that the SFY 2024 base data reflects a reasonable level of these service expenditures compared to emerging information.

10 PROGRAM DESIGN CONSIDERATIONS

Mercer has adjusted the data for known programmatic design elements anticipated to impact the projected SFY 2026 claims expenditures. Mercer has utilized information in the SFY 2024 encounter data, as well as information provided by DHHS, to assess the impact of known programmatic changes to the capitation rates. Specific discussion around Expansion rate-setting and how program design considerations were reflected can be found in Section 13.

10.1 Additional Adjustments to SFY 2024 Encounter Data

The following base data considerations were developed to address additional information provided regarding the SFY 2024 PHP encounter data, after the January 9, 2025 SFY 2026 Rate Book publication.

10.1.1 Unbilled State Lab Claims

Based on information from the State, approximately $2.7 million of total State laboratory testing claims across all programs for dates of service within SFY 2024 have not been billed to the PHPs and are therefore not reflected in the encounter data. Because these claims were incurred within the base data period, they need to be added to reflect a fully incurred SFY 2024 lab cost level. The total claims to add were provided by DHHS and allocated by region and rate cell to the Laboratory and X-ray service line based on SFY 2024 claims utilization. The impact by rate cell is shown below.

Table 13: Total Impact of Unbilled State Lab Claims

COA	PMPM/Payment Impact
ABD	0.0%
TANF, Newborns (<1 Year)	0.0%
TANF, Children (1 Year–20 Years)	0.0%
TANF, Adults (21+ Years)	0.1%
Maternity Event	0.0%
Newly Eligible, Ages 19 Years–24 Years	0.1%
Newly Eligible, Ages 25 Years–34 Years	0.1%
Newly Eligible, Ages 35 Years–44 Years	0.1%
Newly Eligible, Ages 45 Years–64 Years	0.1%

10.2 Program Design Changes Effective During SFY 2024

These program design elements were implemented by DHHS during SFY 2024 and are therefore partially reflected in the base encounter experience. Mercer reviewed prior methodologies and the available SFY 2024 encounter data to inform updates to previously developed program changes, as needed.

10.2.1 BH Service Changes

The following items relate specifically to BH service changes. Overall, these changes had an impact of 0.1%, or $0.35 PMPM, on the Standard Plan rate cells. Below is additional detail regarding each change and a table summarizing the impact of these changes by rate cell. Note that although the mental health parity changes were effective after SFY 2024, this adjustment was included within this section given the small magnitude of these adjustments in aggregate.

10.2.1.1 Mental Health Parity and Addiction Equity Act Compliance

Effective January 1, 2025, DHHS has determined that to comply with the Mental Health Parity and Addiction Equity Act, the Standard Plan PHPs cannot apply the quantitative treatment limits and select non-quantitative treatment limits on BH services outlined in North Carolina's Medicaid State Plan. Mercer performed an analysis

to quantify the capitation rate impact of removing these limits by reviewing historical volume of beneficiaries at or near the current limits, as well as prior authorization data. An upward adjustment was applied to the rates based on this analysis.

10.2.1.2 American Society of Addiction Medicine SUD Service Array Changes

SUD service array changes were implemented in SFY 2024 and are expected to continue through SFY 2026. This program change considers DHHS' planned American Society of Addiction Medicine (ASAM) service expansions related to Levels 1 Withdrawal Management (WM), 2 WM, as well as the repricing of existing services for ASAM levels 2.1, 2.5, and 3.7 WM.

10.2.1.3 Opioid Treatment Program Changes

Effective October 1, 2023, DHHS increased the blended OTP bundled payment amount from $221.88 to $254.93 per week. This adjustment reprices the base experience prior to October 1, 2023 to the new bundled rate, which is expected to be in effect during the SFY 2026 contract period.

10.2.1.4 Copay Waiver for Nicotine Replacement Therapy and Opioid Treatment

Effective April 1, 2024, DHHS waived copays on opioid antagonist medication used to treat opioid disorders, nicotine replacement therapy medications used to treat nicotine addiction and aid in smoking cessation, and medications used for opioid dependence. As this change increases the expense associated with these medications for the health plans moving forward, Mercer developed an adjustment to add the historical cost of copays for these drugs into capitation rates for July 1, 2023 through March 31, 2024.

The cumulative impact of the above BH service adjustments is illustrated in the table below by COA.

Table 14: Total Impact of BH Service Changes from Section 10.2.1

COA	PMPM/Payment Impact
ABD	0.1%
TANF, Newborns (<1 Year)	0.0%
TANF, Children (1 Year–20 Years)	0.0%
TANF, Adults (21+ Years)	0.2%
Maternity Event	0.0%
Newly Eligible, Ages 19 Years–24 Years	0.2%
Newly Eligible, Ages 25 Years–34 Years	0.2%
Newly Eligible, Ages 35 Years–44 Years	0.2%
Newly Eligible, Ages 45 Years–64 Years	0.2%

10.2.2 Emerging Gene Therapy Considerations

In addition to the trends applied to historical pharmacy utilization, Mercer made an explicit adjustment to the capitation rates to consider new high-cost, low-utilization gene therapies, including new treatments for hemophilia, sickle cell disease (SCD), and other genetic conditions. For the SFY 2026 capitation rate adjustment, Mercer took a two-step approach.

The first step was to remove historical drug administrations in the SFY 2024 base data for those on the NC Select Drug List, as they are one-time administrations and leaving them in would result in funding being skewed toward the regions in which they occurred during the base data time period.

In the second step, Mercer worked with pharmacists and utilized specific knowledge of drug pipelines and recent and upcoming approvals, along with projected Standard Plan enrollment and prevalence information, to develop cost estimates for these therapies. These cost estimates were then distributed statewide, based on projected enrollment for relevant populations (e.g., some drugs may only be appropriate for child or adult populations). The drug costs built in during this step reflect reductions for the expected federal drug rebate amounts in instances where some portion of the cost will be reimbursed separately as a part of the NC Select Drug List Case Payment. Please refer to Section 16 of this document for additional detail regarding these payments. Removal of the Case Payment impact is to ensure duplication of reimbursement is avoided within the capitation rate development process.

Table 15: Total Net Impact of Gene Therapy Considerations

COA	PMPM/Payment Impact
ABD	−0.1%
TANF, Newborns (<1 Year)	−0.4%
TANF, Children (1 Year–20 Years)	0.9%
TANF, Adults (21+ Years)	0.3%
Maternity Event	0.0%
Newly Eligible, Ages 19 Years–24 Years	0.3%
Newly Eligible, Ages 25 Years–34 Years	0.3%
Newly Eligible, Ages 35 Years–44 Years	0.3%
Newly Eligible, Ages 45 Years–64 Years	0.3%

10.2.3 BH Reimbursement Rate Increases

The North Carolina General Assembly appropriated funds in the Current Operations Appropriations Act of 2023 (SL 2023-134) to increase the Medicaid reimbursement rates for providers of mental health (MH), SUD, and I/DD-related services. The BH reimbursement rate increase legislation was intended to increase payments to providers of MH, SUD, and I/DD services to better align with the current cost of providing these services. Reimbursement changes were effective January 1, 2024.

This adjustment accounts for BH reimbursement increases implemented as contractual rate floors in the PHP Contract, and similar increases for BH ILOS. Contractual rate floors for Outpatient BH and enhanced MH services reflect a required minimum level consistent with the Medicaid State Plan fee schedules. Updates to the Medicaid State Plan fee schedules were determined based on either Medicare reimbursement levels or inflationary increases since DHHS' last fee schedule update.

Mercer used SFY 2024 Standard Plan data to evaluate the impact of the above changes. To reflect a full year of experience at the new rate levels, Mercer reviewed and relied on observed unit cost changes between the first and second half of SFY 2024. January 2024–June 2024 encounter experience for the affected services was relied upon to determine the capitation rate adjustment required to achieve the required funding levels.

The table below illustrates the aggregate impact of these adjustments on total service PMPMs applicable to the SFY 2026 capitation rates.

Table 16: Impact of BH Reimbursement Rate Increase Program Change

COA	PMPM/Payment Impact
ABD	0.2%
TANF, Newborns (<1 Year)	0.0%
TANF, Children (1 Years–20 Years)	0.5%
TANF, Adults (21+ Years)	0.6%

COA	PMPM/Payment Impact
Maternity Event	0.0%
Newly Eligible, Ages 19 Years–24 Years	0.6%
Newly Eligible, Ages 25 Years–34 Years	0.6%
Newly Eligible, Ages 35 Years–44 Years	0.6%
Newly Eligible, Ages 45 Years–64 Years	0.6%

10.2.4 Dental Procedures at an Ambulatory Surgical Center

Per Session Law 2023-129, approved September 29, 2023, DHHS will no longer reimburse Ambulatory Surgical Centers (ASCs) based solely on the length of the procedure. As of October 1, 2023, DHHS reimburses ASCs so that services billed under Healthcare Common Procedure Coding System (HCPCS) procedure code G0330 are reimbursed at 95% of the total payment rate listed on the Medicare Part B Hospital Outpatient Prospective Payment System (OPPS), in effect as of January 1, 2023. Starting January 1, 2024, and each year thereafter, DHHS shall update these rates annually so that services are reimbursed at 95% of the Medicare Part B OPPS payment rate, in effect as of January 1, for that procedure code. The reimbursement rate for G0330 was subsequently updated in the State's ASC fee schedule to $2,914.24 per procedure, effective January 1, 2024. The January 1, 2024 fee schedule update represented a 600% increase from the existing unit cost, so Mercer has adjusted for this rate increase, which is only partially reflected in the SFY 2024 base period. Subsequent annual fee schedule rate increases are considered as a part of the prospective trend analysis.

Mercer reviewed historical utilization for this service code delivered at ASCs and adjusted the underlying data to reflect the higher unit cost of $2,914.24. This translated to a 0.1%, or $0.36 PMPM, adjustment to the Standard Plan program.

Table 17: Impact of ASC Dental Procedure Reimbursement Change

COA	PMPM/Payment Impact
ABD	0.0%
TANF, Newborns (<1 Year)	0.0%
TANF, Children (1 Year–20 Years)	0.4%
TANF, Adults (21+ Years)	0.0%

Newly Eligible, Ages 19 Years–24 Years	0.0%
Newly Eligible, Ages 25 Years–34 Years	0.0%
Newly Eligible, Ages 35 Years–44 Years	0.0%
Newly Eligible, Ages 45 Years–64 Years	0.0%

10.3 Program Design Changes Effective After SFY 2024

The following program design elements were implemented or are anticipated to be implemented by DHHS after the SFY 2024 base data period. Because no experience for these programmatic changes exists in the base data, adjustments are needed to align the historical experience with expectations for the SFY 2026 rating period. Mercer reviewed prior methodologies, documentation from DHHS, and historical and emerging data, as available, to develop methodologies and adjustments for these design elements, as appropriate.

10.3.1 Expanded GLP-1 Coverage for Cardiovascular Risk Reduction, Obstructive Sleep Apnea, and Weight Loss Indications

This adjustment addresses expanded coverage of GLP-1 drugs for indications of cardiovascular risk reduction, obstructive sleep apnea, and weight loss. Mercer reviewed market and manufacturer literature, as well as CDC information and other publications to inform the proportion of populations who will seek this new treatment in

SFY 2026. Emerging experience through March 2025 for Standard Plan populations, as well as broader North Carolina Medicaid populations, was also reviewed to inform the adjustment.

Consideration was made to avoid compounding with other rate setting elements as part of this adjustment. After determining an appropriate estimated level of funding for SFY 2026 based on expected SFY 2026 enrollment, Mercer backed out the impact of managed care and acuity factors related to CCU, so that later application of the factors in the rate calculation would not influence the adjustment. This dynamic is illustrated below.

Table 18: Illustration of GLP-1 Rate Component Interactions

Row Label	Description	Non-Expansion	Expansion	Total Standard Plan
A	SFY 2026 Estimated GLP-1 Costs	$281,484,545	$309,325,980	$590,810,525
B	Average Pharmacy Managed Care Adjustment	-1.3%	0.0%	-0.6%
C	Average CCU Acuity Factor	3.3%	5.5%	4.4%
D = A / (1 + B) / (1 + C)	SFY 2026 Program Change Amount	$276,228,846	$293,086,573	$569,315,419
E = A = D * (1 + B) * (1 + C)	**Amount in Standard Plan Service Rates (prior to Non-Benefit Expenses)**	**$281,484,545**	**$309,325,980**	**$590,810,525**

Table 19: Percentage Impact of Expanded GLP-1 Indications by Rate Cell

Newly Eligible, Ages 25 Years–34 Years	13.0%
Newly Eligible, Ages 35 Years–44 Years	12.3%
Newly Eligible, Ages 45 Years–64 Years	6.3%

10.3.2 FQHC/RHC Reimbursement Changes

Beginning August 1, 2024, DHHS instituted a statewide minimum fee schedule for FQHC/RHC visits. The minimum is $117.32 for FQHC visits and $83.30 for RHC visits. This represents a net reduction to historical FQHC/RHC interim payment unit costs compared to SFY 2023 when these payment rates were established using a provider-specific cost-based methodology. The offsetting revenue for the FQHC/RHCs will be paid to the PHPs via a wrap payment amount funded outside of capitation and paid by DHHS on a non-risk basis. For capitation rates, Mercer re-priced the appropriate FQHC/RHC utilization to these new minimum payment levels. This overall was a $28.9 million, or $1.06 PMPM, decrease to the Standard Plan program.

Table 20: Impact of FQHC/RHC Unit Cost Repricing

COA	PMPM/Payment Impact
ABD	−0.1%

Newly Eligible, Ages 45 Years–64 Years	−0.3%

10.3.3 Additional Items Evaluated, but not Adjusted For

10.3.3.1 Therapy Visit Limit Changes

Effective December 1, 2023, DHHS updated its State Plan regarding annual limits on therapy services. Rather than a hard limit of 27 visits across all therapy types (PT, OT, and ST), the new limits are 30 visits for PT/OT rehabilitative services, 30 visits for PT/OT habilitative services, 30 visits for ST rehabilitative services, and 30 visits for ST habilitative services.

Since Early and Periodic Screening, Diagnostic, and Treatment requirements already in place allow children access beyond the limits, Mercer identified that this limit change may impact adult therapy utilization but would not materially impact utilization for children. Mercer reviewed historical therapy utilization for adults and observed that historically only 0.1% of the population had 21 or more visits. This low level of individuals near the current limit of 27 visits led to Mercer's conclusion that this change in limits is an immaterial change to overall capitation payment levels.

10.3.3.2 Other Service Reimbursement

The contract outlines a number of PHP provider payment requirements for other service types, including LHD payments, AMH payments, out-of-network providers, Indian Health Care Providers, State-owned and operated facilities, and hospice payments. Based on a review of the contract and current program requirements, as well as discussions with DHHS, Mercer understands that these reimbursement requirements do not diverge from historical SFY 2024 encounter data experience. Mercer did not include an explicit adjustment in the capitation rates for PHP reimbursement requirements for these other service types, but did consider unit cost and utilization trends as outlined in Section 9.

10.3.3.3 Additional Directed Payments for Certain Providers

Per the contract, and as allowed under 42 CFR §438.6(c)(1)(iii)(B), the PHPs shall make additional directed payments as determined by DHHS. This includes payment to certain in-network providers, including, but not limited to, FQHC/RHCs, LHDs, certain faculty physicians affiliated with the teaching hospitals for each University of North Carolina (UNC) medical school, hospitals owned by UNC Health Care or Vidant Medical Center, and acute care hospitals more broadly. These payments are outside the monthly PMPM capitation payments and Maternity Event payments and not captured in the SFY 2024 encounter data summarized in this report. Therefore, no adjustment has been considered.

11 MANAGED CARE ASSUMPTIONS

Managed care adjustments are applied to capture appropriate, expected changes in the utilization of certain services as a result of PHP utilization and care management initiatives. For SFY 2026 rate development, Mercer relied on analysis of Low-Acuity Non-Emergent (LANE) emergency department (ED) utilization and Potentially Preventable inpatient Admissions (PPAs) in the base encounter experience, as well as an analysis of inappropriate prescribing and/or dispensing patterns identified in the pharmacy claims data. Additionally, consideration was included for further inpatient and ED savings expected in HOP regions, as a result of the pilot program. For the Expansion populations, no additional savings was assumed beyond what is already reflected in the TANF, Adults SFY 2024 base experience.

In general, PHPs are expected to impact the current levels of medical cost and utilization through care management. The overall managed care savings may be achieved through a reduction in utilization of high-cost and high-intensity services as a result of activities such as, but not limited to:

- Encouraging the use of preventive services so acute conditions are not exacerbated to the point that they require a visit to the ED or hospitalization
- Reducing non-emergent use of the ED through member education and viable alternatives (e.g., extended hours for doctor's offices, after-hours urgent care clinics, or nurse advice lines)
- Hospital discharge planning to ensure a smooth transition from facility-based care to community resources and to minimize readmissions
- Promoting access and care coordination related to HOP services, which have been observed to reduce medical spending for services such as inpatient and ED

11.1 Overall Managed Care Findings

To support the development of SFY 2026 capitation rates, Mercer conducted a comprehensive efficiency analysis using SFY 2024 encounter data for the North Carolina Standard Plan managed care program. The goal of this analysis was to identify quantifiable savings opportunities in ED and Inpatient Hospital utilization, as well as pharmacy efficiencies, with adjustments applied to reflect the expected impact of managed care in addressing these inefficiencies. These efforts are in alignment with DHHS' focus on value-based purchasing strategy.

The efficiency analysis included review of four components: LANE ED visits, PPAs, an assessment of HOP impact, and pharmacy-specific prescribing patterns. These components reflect nationally accepted clinical frameworks and other published findings and observations related to health-related social needs (HRSNs).[15]

Mercer applied a Targeted Efficiency Level (TEL) that reflects an estimate of the portion of identified inefficiencies that could reasonably be reduced during the rating period. This adjustment supports the development of reasonable, achievable managed care assumptions during SFY 2026. For LANE, PPA, and the pharmacy analyses, a 75% TEL was used. In regions participating in the HOP program additional savings were applied based on observed cost differentials for those engaged with the HOP program.

The tables below illustrate the overall impact of the Year 5 managed care assumptions by rate cell and service. Overall, the application of the managed care savings factors amounts to an approximate −1.0% impact on the projected SFY 2026 cost of Standard Plan medical benefits. Regional variations are driven by varying assumptions for the Pharmacy COS, since observed utilization varies by region for certain rate cells and whether or not the region is a HOP region; all other assumptions by COS were applied consistently by region.

11.2 LANE Analysis

The LANE analysis identifies instances when Medicaid eligibles may not have needed to visit the ED if they had received effective outreach, care coordination, and/or access to preventative care. The management of the identified LANE visits is an effective cost containment strategy that can help reduce healthcare inefficiencies in the ED setting. This analysis does not imply that beneficiaries should be denied access to EDs or that PHPs should deny payment for ED visits. Instead, it was designed to reflect that appropriate care management strategies could have prevented or preempted some care provided in the ED setting for low acuity, primary care treatable conditions.

The LANE methodology was developed by actuaries and clinicians with ED and managed care experience with input from various Medicaid program clinical staff, including Medicaid Medical Directors. Medicaid program experience, national guidelines and best practices, and national literature review all supported development of the analysis. Based on this review, a process was developed to identify low to moderate acuity diagnosis codes.

As a first step, a LANE visit is identified by examining the primary International Classification of Diseases, Tenth Revision (ICD-10) diagnosis on each encounter using the research noted. These ICD-10 codes are grouped into subgroups that were assigned a potentially preventable percentage assumption based on the complexity of the code. Next, the CPT code on the ED claim was utilized to determine the appropriateness of the visit being preventable; namely, only the lower-acuity codes (CPT 99281–99283) are assumed to be preventable. Then, a hierarchical process was used to determine the overall level of potential adjustment. Visits were accumulated, beginning with the lowest acuity visits, until the percentage of preventable visits was achieved for each diagnosis code group. No encounters for the most serious visits coded with 99284 or 99285 were removed.

A replacement cost offset was made for removed LANE visits to reflect the costs associated with ambulatory outpatient care. This offset includes the cost for an average physician visit, as well as average laboratory and radiology costs, as appropriate, depending on the diagnosis.

Finally, the 75% TEL was applied. The impact by rate cell is summarized below.

Table 23: SFY 2026 LANE Impact Summary

COA	ED COS	Physician — Primary Care COS	Laboratory/Radiology COS	All COS
ABD	−1.5%	0.5%	0.6%	−0.1%
TANF, Newborns (<1 Year)	−6.4%	0.6%	6.9%	−0.2%
TANF, Children (1 Year–20 Years)	−5.1%	1.1%	2.9%	−0.5%
TANF, Adults (21+ Years)	−2.3%	1.0%	0.6%	−0.2%
Maternity Event	0.0%	0.0%	0.0%	0.0%
Non-Expansion Total	**−3.7%**	**0.8%**	**1.6%**	**−0.2%**

11.3 PPA Analysis

The PPA analysis is an effective cost containment strategy that can help reduce the effect of healthcare inefficiencies in the inpatient hospital setting. The analysis identifies opportunities for managed care impact on inpatient admissions that could be achieved through PHP management of PPAs. Mercer's PPA analysis identifies inpatient admissions that could have been avoided through high-quality outpatient care and/or reflect conditions that could be less severe and not warrant an inpatient level of care if treated early and appropriately. The PPA analysis can help identify potential reductions of healthcare inefficiencies in the inpatient hospital setting and support DHHS' desire for a value-focused purchasing strategy.

The PPA methodology was developed by an expert panel comprised of physicians and nurses with managed care experience and is based on an extensive literature review and predicated upon national guidelines and best practices. The criteria for identifying PPAs have been established by the Agency for Healthcare Research and Quality.[16] The Prevention Quality Indicators (PQIs) applicable to the adult rate cells and Pediatric Quality Indicators (PDIs) were used in conjunction with the encounter data to identify those admissions that could have potentially been avoided.

Within the encounter data, every inpatient encounter was reviewed to determine if it met the PQI or PDI criteria and those that met the applicable criteria, based on rate cell of the beneficiary, were flagged as a PPA. Mercer then considered the underlying risk for each of the eligibles using a Clinical Global Exclusion (CGE) methodology. The CGE methodology was developed by clinicians with managed care experience as a mechanism to identify serious clinical conditions that could impact the general care and/or treatment over time. Admissions for beneficiaries meeting a CGE criteria likely require a higher level of care and are less likely to be avoided, so they are not considered in the overall adjustment calculation.

Once the CGE criteria were applied, each remaining admission was reviewed to determine whether the beneficiary met the minimum managed care enrollment duration threshold. These minimum duration thresholds were developed by clinicians experienced with Medicaid managed care and vary based on the PQI/PDI. If a beneficiary did not meet the minimum threshold, the admission is not considered in the overall adjustment calculation.

Finally, the 75% TEL was applied. No cost offsets were considered in the PPA analysis as this adjustment is limited to only inpatient facility costs. The impact by rate cell is summarized below.

[16] https://qualityindicators.ahrq.gov/

Table 24: SFY 2026 PPA Impact Summary

COA	Inpatient COS	All COSs
ABD	−7.9%	−1.9%
TANF, Newborns (<1 Year)	−0.2%	−0.1%
TANF, Children (1 Year–20 Years)	−3.7%	−0.3%
TANF, Adults (21+ Years)	−6.0%	−0.7%
Maternity Event	0.0%	0.0%
Non-Expansion Total	**−3.5%**	**−0.8%**

11.4 HOP Savings

For regions included in the HOP program (Standard Plan regions 1, 5, and 6), Mercer measured claims-based outcomes from CY 2023. This analysis centered around comparing non-HOP medical PMPMs for HOP users against a control group of individuals who were screened as having an HRSN, but who did not receive HOP services during the data period.

Mercer reviewed claims experience in the affected regions to understand how medical costs changed for individuals once they began receiving HOP services. Baseline trends were then leveraged from the control group to estimate what the HOP users' medical PMPMs would have looked like over time without HOP intervention.

The difference between average medical PMPMs over a 12-month period for HOP users and the estimated medical PMPMs without HOP intervention indicate that receiving HOP services significantly influenced the change in non-HOP medical costs more than other interventions or changes seen in the control group.

When determining the impact of the pilot program on the SFY 2026 rating period, Mercer leveraged HOP enrollment projections provided by the State to estimate the number of new user months that would reflect savings from the HOP program during SFY 2026, compared to the SFY 2024 historical base data. The PMPM savings estimated during the cost analysis were then applied to these member months to determine the magnitude of new HOP savings. A summary of this calculation is shown in the table below.

Table 25a: SFY 2026 HOP Impact Summary

COA	Estimated Member Months with New HOP Savings	Estimated Inpatient PMPM Savings for HOP Enrollees	Estimated Inpatient HOP Savings in HOP Pilot Regions	Estimated ED PMPM Savings for HOP Enrollees	Estimated ED HOP Savings in HOP Pilot Regions
ABD	21,234	$111.26	1.0%	$27.68	1.2%
TANF, Newborns (<1 Year)	N/A	N/A	N/A	N/A	N/A
TANF, Children (1 Year–20 Years)	53,775	$32.28	2.3%	$8.65	0.4%
TANF, Adults (21+ Years)	13,039	$54.20	1.2%	$3.29	0.1%
Maternity Event	N/A	N/A	N/A	N/A	N/A
Non-Expansion Total	**88,047**	**$54.97**	**2.1%**	**$11.16**	**0.4%**

Before applying these savings, Mercer also considered potential interactions between savings identified for HOP populations and those identified in the LANE and PPA analyses. To ensure overall reasonability in savings assumptions, Mercer limited the combined inpatient and ED savings in HOP regions to reflect no more than the equivalent of a 90% TEL for LANE and PPA analyses for each rate cell and COS combination.

Table 25b: SFY 2026 HOP Impact Summary

COA	Inpatient COS	ED COS	All COSs
ABD	−1.0%	-0.3%	−0.3%
TANF, Newborns (<1 Year)	N/A	N/A	N/A
TANF, Children (1 Year–20 Years)	−0.7%	-0.4%	−0.1%
TANF, Adults (21+ Years)	−1.2%	-0.1%	−0.2%
Maternity Event	N/A	N/A	N/A
Non-Expansion Total	**−0.6%**	**-0.3%**	**−0.2%**

HOP administrative and service costs are funded outside of capitation and thus no replacement costs were considered.

11.5 Pharmacy Benefits

Reimbursement and utilization management strategies play a key role in controlling pharmacy costs. Effective management of federal and supplemental rebates also contributes to decreasing the overall net drug costs to the Medicaid program. Along with other medical services, DHHS has moved the management of the pharmacy benefit under the control of the PHPs.

11.5.1 Clinical Edits

Mercer performed a retrospective analysis of pharmacy claims data to identify inappropriate prescribing and/or dispensing patterns, using a customized series of clinical rules-based, pharmacy utilization management edits. These edits are developed by Mercer's managed pharmacy practice based on North Carolina Standard Plan-specific pharmacy policies, published literature, industry-standard practices, clinical appropriateness review, professional expertise, and information gathered during the review of several Medicaid managed care organization (MCO) pharmacy programs across the country. This includes a review of quantity limits, dosage limits, age edits, and therapeutic duplication as currently contemplated in the North Carolina Medicaid Direct system and therefore allowable to be managed by the PHPs through claims adjudication and prior authorization approval process. Based on Mercer's experience, these are standard clinical edits and prior authorization activities in pharmacy benefit management, and we would expect the PHPs and their Pharmacy Benefit Manager (PBM) to employ similar strategies in the administration of the pharmacy benefit. Mercer's expectation is that these edits will be actively applied and managed by the PHP PBMs to align with the overall incentives in place for the PHPs to appropriately manage the care of their enrollees.

This analysis resulted in an estimated total SFY 2026 savings opportunity of approximately −0.2% across Non-Expansion rate cells, after application of the 75% TEL.

11.5.2 Drug-Disease Matching (DxRx) Analysis

Mercer also reviewed the pharmacy claims for select medications to determine if clinically appropriate supporting diagnoses appeared in the medical claims data. The select list of medications included those with the potential for misuse/abuse, medications that are relatively high cost, and/or carry safety concerns. Mercer's clinicians and pharmacists developed a list of clinically appropriate diagnosis codes based on peer-reviewed literature, FDA-approved indications, and clinically accepted off-label use.

At the member level, Mercer reviewed the SFY 2024 pharmacy data to identify claims that did not have a corresponding, clinically appropriate medical diagnosis present (ICD-10 diagnosis code) within the previous 24 months or the following six months. Each pharmacy claim that did not have an appropriate diagnosis in the medical data was considered potentially inappropriate (or avoidable).

Although the diagnosis-drug pairings are clinically sound, it is expected that situations exist in which clinical rationale supports the lack of corresponding medical diagnosis. As such, adjustment factors were applied to the results for each included medication. Cost offsets were also applied to reflect an alternative therapy that would have been utilized in place of the inefficient prescription drug claim, which also reduced the adjustment value.

This analysis resulted in an estimated total SFY 2026 savings opportunity of approximately −0.1% across Non-Expansion rate cells, after application of the 75% TEL.

Table 26: SFY 2026 Clinical Edits and DxRx Impact Summary

COA	Rx COS	All COSs
ABD	−0.7%	−0.3%
TANF, Newborns (<1 Year)	0.0%	0.0%
TANF, Children (1 Year–20 Years)	−1.1%	−0.3%
TANF, Adults (21+ Years)	−1.5%	−0.7%
Non-Expansion Total	**−1.0%**	**−0.3%**

Additionally, under FFS, DHHS has developed a strong pharmacy benefit program, which includes a PDL that generates significant pharmacy rebates to DHHS on the prescription drugs administered to Medicaid beneficiaries. The State has required that PHPs adhere to the State PDL, and Mercer considered the State PDL requirements in the evaluation of the clinical edits and DxRx results. Mercer does not anticipate the PHPs will be able to negotiate further material rebates with the manufacturers under managed care, and no additional adjustment was assumed related to PHP rebate opportunities.

12 ADDITIONAL ADJUSTMENTS TO SERVICE COSTS

Outside of the program design considerations, additional service adjustments have been evaluated for capitation rate development. First, an acuity adjustment was considered as a result of the BH I/DD Tailored Plan criteria and its impact on ongoing members meeting the State-defined criteria. Additionally, a separate acuity adjustment was considered to account for beneficiaries eligible for the BH I/DD Tailored Plan and Tribal populations who choose to opt-in to the Standard Plan. Finally, an enrollment acuity adjustment was considered as a result of population mixture changes stemming from the continuous coverage unwinding of the PHE MOE requirements expected to impact the SFY 2026 rating period compared to the SFY 2024 base data period. The adjustments described in Sections 12.1 and 12.2 are captured in the program design change step in the rate calculation. The adjustment described in Section 12.3 is a separate below-the-line adjustment. The impacts described are specific to the Non-Expansion populations. Further discussion around the impacts of these additional service adjustments as part of Expansion rate-setting can be found in Section 13.

12.1 Ongoing BH I/DD Tailored Plan Identification

As the number of months used within the BH I/DD Tailored Plan criteria to look back at historical claims grows from the SFY 2024 base time period to the end of the SFY 2026 rating period, an adjustment was considered to account for individuals continually meeting BH I/DD Tailored Plan criteria and getting disenrolled from the Standard Plan.

Mercer reviewed SFY 2023–SFY 2024 PHP encounter experience monthly and identified members who began in the Standard Plan program and moved to the BH I/DD Tailored Plan program before the end of SFY 2024. This data was used to determine how many members are newly identified as meeting BH I/DD Tailored Plan criteria on average each month. Mercer used this information to project the number of new individuals meeting BH I/DD Tailored Plan criteria at the midpoint of SFY 2026 by utilizing the average enrollment over SFY 2024 and assuming the same member turnover rate identified across the measurement period.

Finally, average PMPM relativities were calculated for these groups based on SFY 2023 and SFY 2024 encounter data, which informed an adjustment to address the assumed change to the overall acuity of the population from the SFY 2024 base period to the SFY 2026 rating period. The expectation is that higher-cost individuals meeting BH I/DD Tailored Plan criteria will move out of the Standard Plan. No adjustment was made to the TANF, Newborns rate cell or the Maternity Event payments for this adjustment. Additionally, the individuals anticipated to move out of the ABD rate cell exhibit lower than average PMPM relativities, so the PMPM adjustment outlined below is positive for this rate cell compared to a downward adjustment for other TANF populations.

Table 27: Ongoing BH I/DD Tailored Plan Identification

COA	Average Standard Plan Enrollment in SFY 2024	New Individuals Meeting BH I/DD Tailored Plan Criteria Per Month	Average PMPM Relativity of New Individuals Meeting BH I/DD Tailored Plan Criteria	PMPM Adjustment
ABD	107,280	0.2%	0.89	0.7%
TANF, Newborns (<1 Year)	N/A	N/A	N/A	0.0%
TANF, Children (1 Year–20 Years)	1,228,040	0.1%	2.46	−3.8%
TANF, Adults (21+ Years)	409,119	0.1%	2.48	−2.4%
Maternity Event	N/A	N/A	N/A	0.0%

12.2 Opt-In Acuity Factor Adjustment

Mercer has evaluated a capitation rate adjustment for populations who are not mandatorily enrolled in the Standard Plan and are instead eligible to opt-into the Standard Plan. The analysis identified sub-populations who could affect the mixture and average acuity of Standard Plan enrollees. Populations included in this adjustment

are BH I/DD Tailored Plan eligibles, as well as members of federally-recognized tribes or individuals eligible for IHS. As previously described, beneficiaries will be defaulted to BH I/DD Tailored Plans based on meeting BH I/DD Tailored Plan eligibility criteria. Members of federally-recognized tribes will default to Medicaid Direct unless the Eastern Band of Cherokee Indians Tribal Option is available.

Within the SFY 2024 encounter base data set, beneficiaries who met BH I/DD Tailored Plan criteria or who were members of federally-recognized tribes who opted-in to the Standard Plan were not removed from the historical data set and were included in the base data summaries illustrated in Section 7. The adjustment outlined in this section estimates the impact of anticipated additional members choosing to opt-in between July 1, 2024 and the end of SFY 2026.

Two methodologies were utilized for purposes of this adjustment, dependent on the rate cell. The first (illustrated in Table 28a) uses a prevalence-based projection intended to account for the differences in total enrollment between the base period and the rating period. This methodology was relied upon for the ABD and TANF, Child populations. The second (illustrated in Table 28b) uses a member-based projection. This methodology was relied upon for the TANF, Adult population as the first method does not fully and appropriately account for the interaction between the opt-in and MOE unwinding acuity adjustment, which is addressed in the following section.

Using available opt-in enrollment experience through March 2025 as provided by DHHS, Mercer evaluated PHP enrollment for individuals with either BH I/DD Tailored Plan or Tribal Managed Care Status (MCS) codes who are enrolled in Standard Plan. Mercer used the observed PHP enrollment to inform the projected SFY 2026 volume of opt-in individuals and used historical SFY 2024 PMPM relativities by rate cell, as measured as part of SFY 2026 capitation rate development, for these sub-populations to estimate the acuity of the individuals who chose to opt-in. In addition, Mercer noted the monthly growth in the volume of opt-in individuals and utilized it differently depending on the methodology. For the prevalence-based projection, the projected opt-in member months as a proportion of projected SFY 2026 overall enrollment was used to calculate an expected population acuity in SFY 2026. For the member-based projection, the projected opt-in member month counts were utilized, along with an enrollment growth factor, to project the assumed SFY 2026 enrollment levels.

Although an adjustment was made to account for additional BH I/DD Tailored Plan eligible members opting in beyond what the SFY 2024 experience shows, the SFY 2024 base data was determined appropriate for expected SFY 2026 Standard Plan enrollment for Tribal members, and therefore no adjustment was made for additional Tribal opt-in members. This is based on Mercer's observations that Tribal opt-in enrollment has not materially increased since the SFY 2024 historical base data period.

The following tables show the observed SFY 2024 enrollment and acuity for the BH I/DD Tailored Plan opt-in population, followed by the acuity adjustments made to the capitation rates based on these assumptions, as described earlier in this section. Mercer reviewed and found that the observed growth levels in the BH I/DD Tailored Plan opt-in population after the December 1, 2022 criteria change have continued through March 2025, based on State enrollment reports. Additionally, as there are a non-zero number of maternity events in the Standard Plan for beneficiaries who meet BH I/DD Tailored Plan criteria, the TANF, Adults adjustment was applied to the Maternity Event rate cell.

Table 28a: BH I/DD Tailored Plan Opt-in Enrollment and Acuity Adjustment — Prevalence Projection

		A	B	C	D	E = (B * C + ((1 – B) * D)	F = [SFY 2026] / [SFY 2024] - 1
COA	**Time Period**	**Total MMs**	**Opt-in Prevalence**	**Opt-in Acuity**	**Non-Opt-In Acuity**	**Overall Acuity**	**Calculated Adjustment**
ABD	SFY 2024	1,287,359	1.1%	1.33	0.996	1.000	0.9%
	SFY 2026	1,194,326	3.9%	1.33	0.996	1.009	
TANF, Newborn (<1 Year)	SFY 2024	855,908	0.0%	N/A	N/A	N/A	0.0%

TANF, Adults (21+ Years)	4,909,423	10,137	3.56	12,346	0.1%

DHHS will monitor Standard Plan enrollment and reserves the right to update the capitation rates during the rating period (subject to CMS approval if needed) if enrollment patterns vary significantly from expectations and have a significant impact on the capitation rates.

12.3 Acuity Factor Due to Unwinding of MOE Requirements

The Consolidated Appropriations Act of 2023 ended the continuous coverage requirement effective March 31, 2023, allowing for beneficiaries not determined eligible to be disenrolled from Medicaid. North Carolina began disenrolling ineligible beneficiaries in July 2023 for all populations. In November 2023, DHHS obtained CMS approval for a temporary 12-month extension of continuous enrollment for child populations, effective with redeterminations due in December 2023. This extension has since been modified to last through June 2025. Additionally, the newly approved 1115 waiver includes continuous enrollment provisions for children ages 5 and under and 24-month eligibility for children ages 6 – 18 years. Redeterminations for children ages 6 – 18 years will be restarted July 1, 2025, however, any related impact on acuity is expected to be immaterial relative to the experience in the base data.

For the Adult population, the SFY 2024 base data experience reflects unwinding activity throughout the 12-month base data period. Based on DHHS analysis, rates of unwinding have varied, and will continue to vary, by region. DHHS has performed research and analysis at the county level to understand the status of redeterminations, which it then used to develop an enrollment projection at the county level, including estimated timing for completion of the backlog of redeterminations. Mercer reviewed these projections and determined they align with expectations and understanding of the SFY 2024 enrollment period. Additionally, Mercer analyzed the SFY 2024 experience to understand the emerging impact of unwinding on the covered population.

For SFY 2026 capitation rates, Mercer used a consistent modeling approach to prior rate-setting iterations to develop the expected increase in acuity as unwinding progresses for the TANF, Adults (21+ Years) rate cell. Mercer reviewed and maintained the expectation developed for prior rate iterations that movement from a full MOE period to a fully unwound period would result in an estimated increase of 7.2% for TANF Adults within the Standard Plan. This expected increase in acuity, along with the level of unwind in the base data period relative to the expected unwinding during SFY 2026 as provided by DHHS, was used to develop an acuity adjustment by region. The tables below illustrate the unwinding status in the base data and expected status during the rating

period (midpoint to midpoint), along with outcomes of the adjustments that were applied to the TANF, Adults (21+ Years) for SFY 2026.

Table 29: TANF, Adults (21+ Years) MOE Unwinding Adjustment

Category	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6
Unwind Status — Mid-SFY 2024	41.2%	24.6%	12.6%	14.8%	26.4%	31.6%
Unwind Status — Mid-SFY 2026	100%	96.9%	62.4%	86.9%	98.0%	100%
Acuity Adjustment	**4.1%**	**5.1%**	**3.6%**	**5.2%**	**5.1%**	**4.8%**

13 EXPANSION MEDICAL COST AND ENROLLMENT DEVELOPMENT

Coverage for the new adult group began on December 1, 2023. This Section details the Expansion-specific rate-setting methodology used to develop the service portion of the capitation rates for these populations.

Four rate cells will continue to be used in the Standard Plan program for the Expansion population, one for each of the following age bands:

- Newly Eligible, Ages 19 Years–24 Years
- Newly Eligible, Ages 25 years–34 Years
- Newly Eligible, Ages 35 Years–44 Years
- Newly Eligible, Ages 45 Years–64 Years

The Expansion Adults are anticipated to have cost profiles similar to those of a beneficiary in the TANF, Adults rate cell. However, some variation in cost is expected due to differences in demographic mix and acuity levels in the Medicaid Expansion population. Mercer used this information, along with input from the State, to develop actuarially sound capitation rates for the Expansion population for the July 1, 2025 to June 30, 2026 rating period.

Maternity event payments for Non-Expansion beneficiaries will be applicable to beneficiaries in any of the four Expansion rate cells, as maternity costs are not expected to vary significantly across these populations. Similarly, the NC Select Drug List Case Payments will also apply to Expansion beneficiaries.

Given the expected cost profile similarities between the Standard Plan TANF, Adults and Expansion Adult rate cells, Mercer relied on various elements of the SFY 2026 Standard Plan TANF, Adults rate development process for purposes of establishing the SFY 2026 Expansion capitation rates. These rating elements include base data, trend, programmatic changes, and other service adjustments. Sections 9 through 12 summarize the assumptions for each of the prospective rate adjustment elements. The sub-sections that follow further describe each rating element, as appropriate.

The service costs developed using the steps in this section, and enrollment projections as needed, were relied on to develop the capitation rates for each newly eligible rate cell. As part of the capitation rates, it was also necessary to consider the non-benefit load components outlined in Section 14 of this document and the risk mitigation requirements outlined in Section 16.

Additionally, an exhibit of the capitation rate development process and factors used for each newly eligible rate cell can be found in Section 15.

13.1 Base Data

North Carolina does not have a full year of historical claims and enrollment data to establish a base data-set specific to the newly eligible populations. Instead, as noted above, Mercer leveraged the assumption that Expansion populations will have similar cost profiles and PMPM costs as those of the Standard Plan TANF, Adults population. This assumption is based on observations made in emerging encounter experience and in other states, as well as the knowledge that the key difference between a TANF, Adults member within a demographic and an Expansion member within the same demographic is income level. Therefore, SFY 2024 TANF, Adults encounter data was used as a basis for the Standard Plan Expansion rate cells.

The base data development process for the TANF, Adults rate cell is described and summarized in Sections 2 through 7 of this Rate Book. Differences in enrollment mixture across adult age/gender groups are addressed through a demographic adjustment described later in this section. AMH payments and CMHRP payments are also included in the base data based on the TANF, Adults experience. CMHRP payments were not included in

development of the Newly Eligible, Ages 45 Years–64 Years rate cell, due to minimal historical pregnancy experience in this age group.

13.2 Trend

Mercer does not expect utilization or unit cost trend patterns to vary materially between the Medicaid Expansion population and the Non-Expansion TANF, Adults population. Therefore, the TANF, Adults annual prospective unit cost and utilization trend assumptions were applied directly to the Expansion rate cells at the region and COS levels. These annual assumptions were applied for 24 months to trend the base SFY 2024 experience to the SFY 2026 rating period. Please refer to Section 9 of this Rate Book for details on the development of the annual trend assumptions.

13.3 Programmatic Changes

Mercer reviewed each programmatic adjustment applied to the Non-Expansion TANF, Adults rate cell for SFY 2026 capitation rates to evaluate which impacts would vary materially for a Medicaid Expansion population. Based on this review, Mercer determined that most programmatic changes, as applied to the TANF, Adults rate cell, would similarly apply to Expansion Adult populations. Therefore, the programmatic change impacts for the corresponding TANF, Adults rate cells were applied as-is for the Expansion rate cells. The only exception to this is the GLP-1 adjustment (Section 10.3.1). This adjustment's dollar impact was developed based on projected enrollment and observed utilization specific to the Expansion populations, which leads to different percentage and PMPM impacts than what is applied to the TANF, Adults rate cell.

Refer to Section 10 of this Rate Book for details on the development of the program change adjustments.

Mercer also needed to evaluate additional impacts specific to the Expansion population. These analyses included a projection of enrollment, as well as a review of demographic mix and acuity for purposes of adjusting the capitation rate levels. These adjustments are discussed in detail in Sections 13.6 and 13.7.

13.4 Managed Care

No further managed care savings expectations are applied to the Expansion rate cells other than what is already inherent in the TANF, Adults base experience, which is the basis of the Expansion rate development, as described in Section 13.1. Mercer made this decision to reflect that Expansion members have lower member durations than other non-Expansion members and the TANF Adult base data already reflects a year 3 efficiency level of the Standard Plan.

13.5 Other Service Adjustments

Mercer also reviewed the other service adjustments described in Section 12 of this Rate Book for applicability to the Expansion rate cells. Mercer evaluated these adjustments and made modifications to the MOE unwinding impact to be appropriately applied to the Expansion populations.

13.5.1 Ongoing BH I/DD Tailored Plan Identification

As described in Section 12.1 of this Rate Book, an adjustment was made for consideration of some portion of members continually meeting BH I/DD Tailored Plan criteria and becoming disenrolled from the Standard Plan. As this dynamic will also impact members within the Medicaid Expansion population in a similar manner as the Non-Expansion TANF, Adults population, Mercer applied the TANF, Adults adjustment factor to the Expansion rate cells as part of the Medicaid Expansion capitation rate development process.

13.5.2 Opt-In Acuity Factor

Similarly, Mercer applied an opt-in acuity adjustment to account for the impact of members not mandatorily enrolled in the Standard Plan program choosing to opt into the program. Mercer does not expect the opt-in behaviors to materially vary between TANF, Adults and Expansion Adults and therefore maintained the same level of adjustment.

Please refer to Section 12.2 of this Rate Book for additional details about the development of this adjustment.

13.5.3 Acuity Factor Due to Unwinding of the MOE Requirements

An adjustment was made to the SFY 2026 TANF, Adults capitation rates to account for the continuing disenrollment of beneficiaries as part of the post-MOE unwinding process. This adjustment was developed based on the unwinding status in the base data period relative to expected unwinding status in SFY 2026.

The Expansion population will not be impacted by the post-MOE unwinding process, as this population was implemented after the end of the PHE. However, since the Expansion rate cells are developed based on a modified TANF, Adults experience, a similar adjustment was applied in the Expansion rate development to adjust the base TANF, Adults experience to a fully unwound level. The table below shows the level of unwind in the base data for the TANF, Adults rate cell, as well the acuity adjustment applied for Expansion rate cells to reflect a fully unwound acuity level.

Table 30: MOE Impact Calculation for Expansion Rate Cells

Category	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6
Unwind Status — Mid-SFY 2024*	41.2%	24.6%	12.6%	14.8%	26.4%	31.6%
Unwind Status — Mid-SFY 2026	100.0%	100.0%	100.0%	100.0%	100.0%	100%
Acuity Adjustment	**4.1%**	**5.4%**	**6.3%**	**6.1%**	**5.2%**	**4.8%**

*Unwind status shown is for TANF, Adults

13.6 Expansion Enrollment Projections

Mercer developed enrollment projections for the Expansion population in the Standard Plan program. These projections were used to support the development of the non-benefit expenses. Expansion enrollment has been ramping up since the population gained eligibility in December 2023. Enrollment for the Expansion population across all North Carolina Medicaid programs is expected to reach a steady state by the end of SFY 2025. Therefore, net monthly enrollment change during SFY 2026 is expected to be driven by normal increases and decreases rather than new program launch.

13.7 Expansion Service Cost Adjustments

In addition to the programmatic changes that overlap with existing populations, Mercer reviewed additional adjustments for applicability when aligning the existing TANF, Adults experience with expectations for the Expansion population, including review of demographic/acuity mix, pent-up demand, and third-party liability (TPL) coverage.

13.7.1 Demographic Acuity Adjustment

Based on a review of SFY 2024 Standard Plan encounter data, Non-Expansion TANF, Adults population claim costs vary materially based on a member's age. Claim costs also vary by gender. To address the expected difference of the Expansion population's demographic mix compared to the TANF, Adults rate cells, the State maintained capitation payments based on the following age bands.

- Newly Eligible, Ages 19 Years–24 Years
- Newly Eligible, Ages 25 Years–34 Years

- Newly Eligible, Ages 35 Years–44 Years
- Newly Eligible, Ages 45 Years–64 Years

This age band variation is intended to protect both the State and the Standard Plan PHPs from significant disparities between enrollment projections and actual membership. Further, the State intends to begin risk adjusting these rate cells starting October 1, 2025.

The SFY 2024 TANF, Adults base PMPMs and existing programmatic changes were not developed at the age band level; therefore, Mercer developed a demographic and acuity adjustment for each rate cell to account for overall differences between the populations, using historical Standard Plan claims experience and risk scores to estimate the relativity of each Expansion rate cell to the TANF, Adults rate cell.

The table below summarizes the SFY 2024 TANF, Adults base data and assumed enrollment and demographic/acuity factors for the Expansion rate cells. For purposes of reading the table, below is a brief overview of each of the identified rows:

- Rows A through C are measured from the Statewide SFY 2024 Standard Plan TANF, Adults encounters and enrollment data.
- Row D is developed as part of the enrollment projections summarized in Section 13.6 of this document. This percentage aligns with gender splits observed through the end of calendar year 2024 for the Expansion rate cells.
- Row E relies on the SFY 2024 encounter data PMPMs by age/gender as summarized in Row A and Row B and then uses the estimated gender split in Row D to arrive at a new base PMPM for each age band.
- Row F is an additional acuity factor developed based on Mercer's review of risk scores from multiple other Expansion states that were all several years removed from Expansion implementation to avoid pent-up demand in early years of Expansion. This risk score review was focused on the comparison of average risk scores for TANF, Adults populations by age/gender cohort compared to Expansion populations for the corresponding cohort. The risk scores were evaluated from each state's risk adjustment model and relied on consistent methodology as has been applied to North Carolina's Medicaid Managed Care program. The time periods reviewed included pre-COVID-19 and 2024 data. Additionally, Mercer reviewed emerging December 2023–June 2024 encounter experience and put 50% weight on observed ratios when determining the final acuity factors, relying on the April 2024 through June 2024 period.
- Row G arrives at the final base service PMPM by applying the factors in Row F to the demographic-adjusted PMPM results in Row E.
- Row H illustrates a comparison of Row G to the average of Rows A and B weighted on Row C.

Table 31: Demographic and Acuity Factor Development

Row Label	Description	Newly Eligible, Ages 19 Years–24 Years	Newly Eligible, Ages 25 Years–34 Years	Newly Eligible, Ages 35 Years–44 Years	Newly Eligible, Ages 45 Years–64 Years
A	SFY 2024 TANF, Adults Female Base PMPM	$208.53	$288.07	$442.59	$737.07
B	SFY 2024 TANF, Adults Male Base PMPM	$139.12	$249.69	$399.45	$606.38
C	SFY 2024 TANF, Adults Female Percentage	59.8%	92.0%	84.2%	71.0%
D	Assumed Expansion Female Percentage	54.2%	57.7%	60.5%	58.4%
E = Rows A and B weighted on Row D	Re-Weighted Expansion Overall PMPM	$176.76	$271.84	$425.56	$682.65
F	Additional Expansion Acuity Factor	4.5%	−3.4%	−2.3%	2.5%
G = E x (1 + F)	Final Expansion Overall PMPM	$184.72	$262.62	$415.90	$699.58

Row Label	Description	Newly Eligible, Ages 19 Years–24 Years	Newly Eligible, Ages 25 Years–34 Years	Newly Eligible, Ages 35 Years–44 Years	Newly Eligible, Ages 45 Years–64 Years
H = G / $344.67	Demographic/Acuity Factor Compared to Overall TANF, Adults Base PMPM	0.54	0.76	1.21	2.03

13.7.2 Pent-Up Demand

Mercer reviewed historical encounter experience for TANF, Adults members and identified a pattern of increased utilization during the initial months of Medicaid coverage. This indicates that members entering the Standard Plan program after periods of no or limited coverage experience some level of pent-up demand, resulting in increased utilization of previously inaccessible services. This initial demand increase is temporary and normalizes over time. Although higher prevalence of pent-up demand was expected in the first two years after Expansion launch, Mercer does not anticipate the SFY 2026 rating period to be impacted by pent-up demand, relative to SFY 2024 TANF, Adult experience. Therefore, no adjustment was made for pent-up demand in SFY 2026 rate setting.

13.7.3 TPL

Mercer reviewed historical and emerging encounter experience for both the TANF, Adults and Newly Eligible members and observed TPL penetration rates in the Expansion population align closely with TPL levels observed in the TANF, Adults population. Since the TANF, Adults encounter data is the basis of Expansion rate development, and TPL is not expected to vary between the populations, Mercer did not make an adjustment related to TPL for SFY 2026 rate setting.

14 NON-BENEFIT EXPENSE CONSIDERATIONS

The final component of the capitation rates is the non-benefit expense load. Mercer reviewed the non-benefit expense considerations based on available information. The modeling approach for the non-benefit load consideration was unchanged from the SFY 2025 rates. An additional year of trend applied to wages drove the changes in the overall non-benefit load, along with updates to cost assumptions based on a review of reported PHP administrative costs and other market research.

This portion of the capitation rate accounts for PHP administration costs incurred to operate the Medicaid managed care program. Per 42 CFR §438.5(e) of the Final Rule, "The development of the non-benefit component of the rate must include reasonable, appropriate, and attainable expenses related to MCO, PIHP, or PAHP administration, taxes, licensing and regulatory fees, contribution to reserves, risk margin, cost of capital, and other operational costs associated with the provision of services identified in §438.3(c)(1)(ii) to the populations covered under the contract." Additional guidance specific to non-benefit expense load development in Medicaid Managed Care Capitation Rate Development is included in ASOP 49 excerpt 3.2.12.

The non-benefit expense load includes consideration for general administration (including program management, administrative operations, and utilization management personnel), care management personnel, non-personnel costs, profit/underwriting gain, and premium taxes imposed on the PHPs. The considerations were developed to reflect the PHP contract requirements as defined by DHHS.

The non-benefit expense components (apart from profit/underwriting gain and premium taxes) were developed by building up the costs necessary to administer the PHP requirements as defined by DHHS. Although these expenses may be expressed as a percentage of the capitation rate premium in some exhibits, they were developed as a PMPM.

The overall care management PMPM, which is largely comprised of care management staff (non-personnel related expenses for care management are captured under the general administration assumption), was developed in aggregate on a Statewide basis, and therefore care management staffing assumptions did not vary by region.

The rates also consider required payments to AMH Tier 3 practices as care management costs in the rate development. The costs for care management provided by LHDs, as well as for AMH base payments, are included within the service portion of the capitation rates and not in the non-benefit care management PMPM. These considerations are discussed at the end of Section 14.3.

The tables below show the various non-benefit components summarized as a PMPM and percentage of base capitation rate premium by COA.

Table 32: Overall Non-Benefit Expenses PMPM/Payment by COA

COA	General Administration and Utilization Management	Care Management	Profit/ Underwriting Gain	Premium Taxes	Total
ABD	$72.33	$66.47	$37.71	$40.28	$216.78
TANF, Newborns (<1 Year)	$38.73	$33.02	$18.53	$19.80	$110.08
TANF, Children (1 Year–20 Years)	$12.31	$6.31	$3.45	$3.68	$25.74
TANF, Adults (21+ Years)	$22.55	$16.22	$9.29	$9.92	$57.97
Maternity Event	$91.06	$446.04	$245.54	$262.31	$1,044.95

Newly Eligible, Ages 45 Years–64 Years	3.8%	3.2%	1.81%	1.938%	10.8%
Total Standard Plan	**4.4%**	**3.2%**	**1.81%**	**1.938%**	**11.4%**

Note: The PMPM figures in the tables above were translated to a percentage of the total base capitation rate premium. In comparing these percentages to other states or industry benchmarks, note that the total premium includes consideration for program-specific hospital reimbursement levels as required under the Standard Plan contract. The care management figures do not include AMH base payments, nor CMARC or CMHRP payments.

14.1 Methodology and Data Sources

Mercer developed an administrative model to calculate the expected cost to operate a Medicaid managed care program for each rate cell. The model includes program management and general administrative operations personnel costs, as well as non-personnel costs, necessary to run the program. Mercer prepared another model that established cost expectations for the projected personnel required to achieve DHHS' care management requirements. The results of this modeling and its impact on the capitation rates are discussed in subsequent sections.

The primary data source for estimating administrative staffing salaries was supplied by the BLS website. The Occupational Employment Statistics (OES) program estimates the number of jobs, salary, and wage data by surveying employers throughout the country for nearly 800 occupations. This data is available on a nationwide basis, by state, and between urban and rural areas within each state. The OES survey data includes several statistical measures of salaries and wages, including the hourly and annual mean, median, and various percentiles. The most recent information available is as of May 2024, along with employment cost index (ECI) data through December 2024. The dataset was restricted to experience for North Carolina.[17]

Colliers publishes quarterly reports summarizing commercial real estate market statistics, including the average rent cost per square foot by geography. Quarterly reports are prepared for Charlotte, Raleigh-Durham, and surrounding cities. The latest report available for Raleigh-Durham and for Charlotte and the surrounding areas

[17] https://www.bls.gov/oes/tables.htm

was as of the fourth quarter of 2024. This information supported regional cost expectations for commercial real estate needed to administer a Medicaid managed care program. [18,19]

Mercer reviewed historical administrative and care management cost data through the first half of SFY 2025 as reported by the PHPs in the Financial Reporting Templates. Mercer reviewed cost levels, changes over time, and comparisons across PHPs to inform cost projection assumptions.

The model output depends upon the assumed allocation of PHPs administering the program and their allocation across the six PHP regions. There are currently four Statewide PHPs and one regional contract operating in Regions 3, 4, and 5.[20] Mercer's model allocates applicable staffing positions across regions to account for the anticipated split of responsibilities across regions for PHPs that participate in more than one region.

Mercer relied upon projected SFY 2026 Standard Plan membership data to inform the staffing assumptions and overall administrative PMPM.

14.2 Program Management and Administrative Operations Personnel

The general administration and utilization management model addresses the expected PHP staffing needs to operate and administer a Medicaid program. The capitation rates assume each PHP will have program management staff that is further delineated by executive management, financial, clinical operations, legal (general counsel), human resources, and information technology (IT). Executive management includes the Chief Executive and Chief Operating Officers. Financial staff includes the Chief Financial Officer, accountants, financial analysts, and actuarial staff. Clinical operations include a Chief Medical Officer, Pharmacy Director, and BH Coordinator. IT staff includes the Chief Information Officer, reporting, and monitoring, as well as IT specialists and support.

The capitation rates also include consideration for general administrative operations staff, delineated by customer service, compliance, network, claims processing, and utilization management. Operations staff reflects customer service representatives, compliance officer, program integrity team, provider specialists, and claims processing. Additional staff were added to the model to align with expectations in the PHP contract amendments, including staffing requirements for the BH crisis and nursing lines, as well as the secondary support lines.

Assumptions for the number of Full-Time Equivalents (FTEs) vary by staffing position across each of the PHP regions. In general, salaries for each personnel component were developed based on the median salary levels in the BLS data, along with wage inflation considerations based on ECI data for each staff type in the State, although different percentiles are used to differentiate nuances in a role such as a supervisor position, or when median data is not available. In addition to the BLS salary data, Mercer included an assumption for fringe benefits and payroll taxes.

Several of the personnel listed above, including executive-level management, finance, human resources, and IT, are considered fixed costs in Mercer's modeling, as the number of staff assumed is not dependent upon the number of enrollees. These personnel costs will be incurred regardless of the magnitude of medical claims and/or population size.

14.3 Care Management Personnel

Care management is foundational to the success of North Carolina's healthcare system for Medicaid beneficiaries, supporting high-quality delivery of the right care at the right place and at the right time in the right setting. DHHS' care management strategy focuses on improving the health of beneficiaries through an innovative, person-centered, and well-coordinated system of care that addresses medical and nonmedical drivers of health. Beneficiaries have access to appropriate care management and coordination support across multiple settings of care, including a strong basis in primary care, connections to specialty care, and contributions to health-related resources. Access to local care management draws from the AMH model and participation from the LHDs; additionally, DHHS is committed to providing care management for beneficiaries to address the four priority domains of opportunities for health: housing, food, transportation, and interpersonal safety. Mercer has aligned the care management modeling, as outlined below, with DHHS' care management strategy.[21]

The general care management model addresses both beneficiary care management and care coordination as a part of the approach to ensure efficient, coordinated, and quality care. Care coordination is more administratively focused and, as such, it is available to all beneficiaries and is often administered by a non-licensed individual. Care management is a team-based, person-centered approach to effectively manage patients' medical, social, and behavioral conditions.

The base care management modeling assumes 100% of beneficiaries will have access to care coordination, whereas care management will be focused on low- to high-needs beneficiaries, which are assumed to comprise around 23.0% of the Standard Plan population. Additionally, the base care management modeling includes consideration for care management FTEs based on a beneficiary-to-staff ratio. As mentioned, care coordinators are expected to perform tasks such as conducting care needs screening and providing linkage to community resources, which are more administratively-focused. Given this, a higher beneficiary-to-staff ratio assumption is used for the care coordinator position. Care managers are anticipated to perform more intensive beneficiary care management activities, and therefore Mercer assumed a lower caseload compared to care coordinators. Mercer also assumed varied care manager caseloads depending on a range of low- to high-needs priority population beneficiaries. BLS data and wage inflation as reflected in ECI were then leveraged to estimate the cost per FTE based on anticipated position requirements. FTE assumptions were calculated based on the Standard Plan population average monthly membership (2.3 million).

In total, Mercer built in $14.86 PMPM across the Non-Expansion and Expansion population for care management and care coordination, of which $10.86 PMPM provides funding for care management staffing. The table below describes the staffing assumptions used in the development of this care management PMPM. The $10.86 PMPM is the assumed cost of delivering care management in accordance with DHHS' requirements and assumed average care management need levels within the Standard Plan populations. This figure is agnostic to the entity responsible for the delivery of care management and represents the expected cost to either a Standard Plan or an AMH Tier 3 practice for delivering care management[22]. The buildup is based on a set of assumptions about care manager staffing ratios by care management need level and qualifications, which should be understood as averages rather than policies about how each care team must be constructed.

---

[21] "North Carolina's Care Management Strategy under Managed Care." March 9, 2018. https://medicaid.ncdhhs.gov/north-carolinas-care-management-strategy-under-managed-care-1/download?attachment

[22] Under the AMH Tier 3 program, Standard Plans must delegate certain care management functions and responsibilities to certified practices that meet the program's requirements. Where such delegation occurs, Standard Plans are expected to pay care management fees sufficient to support the delegated activities. Although the Department has declined to establish minimum care management fees to date, the expectation underlying the AMH Tier 3 model is that Standard Plans and providers will arrive at mutually agreeable rates commensurate with the intensity and breadth of the care management being provided.

Table 34: Care Management Staffing Assumptions

Component	Share of Members	Staffing Ratio	Staff Qualifications	Average Compensation per FTE	Cost ($PMPM)
Low Needs Care Management	Non-Expansion: 11.5% Expansion: 13.2%	250 members per FTE	Community Health Worker (CHW)/Licensed Practical Nurse (LPN)/MA/Social Worker	$82,994	$3.30
Moderate Needs Care Management	Non-Expansion: 8.5% Expansion: 9.8%	150 members per FTE	CHW/LPN/MA/Registered Nurse (RN)	$89,291	$4.38
High Needs Care Management	Non-Expansion: 2.0% Expansion: 2.3%	75 members per FTE	RN	$110,719	$2.55
Staff Supervisor	NA	20 members per FTE	N/A	$110,719	$0.62
Total	**N/A**	**N/A**	**N/A**	**N/A**	**$10.86**

Given DHHS' care management strategy and specific requirements outlined in the contract, Mercer also included consideration in the care management assumption for the care coordination of beneficiaries utilizing LTSS, LHD and PHP overlap, AMH contracting and payment requirements, and additional costs for requirements related to opportunities for health initiatives.

Under managed care, DHHS requires PHPs to continue the historical payments to LHDs and CMHRP and CMARC payments in the capitation rates to ensure payment levels not be disrupted in managed care. These costs were included in the base data summaries provided in Section 7. In addition to the historical costs, Mercer included consideration in the care management assumption for a small offset to PHP care management costs given LHD responsibilities, along with additional PHP costs for oversight responsibilities. This offset is included in the care management non-benefit consideration.

As a part of the Standard Plan program design, DHHS has incorporated an AMH model under managed care consistent with the historical Medical Home model. AMH Tier 3 practices perform beneficiary care management activities and are therefore reimbursed at an enhanced rate to account for these additional activities. The enhanced rate assumption for AMH Tier 3 practices is captured in the care management component of the capitation rates and was increased using the same ECI trends and wage assumptions considered elsewhere in the care management. This approach ensured PHPs' direct and delegated costs for care management were appropriate for the rating period.

The AMH Tier 3 payments for SFY 2026 were developed based on the PMPMs outlined in the table above. Additionally, reported financial information for the PHPs was reviewed. Mercer has also included additional consideration for costs to the PHPs to ensure backstop accountability for PHP members tied to an AMH Tier 3 practice and PHP oversight responsibilities and coordination with AMH Tier 3 practices. Historically, a portion of the overall population has not been enrolled with any AMH practice.

There are also a number of contract and staffing requirements related to the DHHS Healthy Opportunities initiative considered in the development of assumed care management costs, such as:

- Care Needs Screening requirements for all members
- Beneficiaries with high unmet social needs, regardless of medical conditions, flagged as a priority population for a comprehensive evaluation and potential care management
- Specific PHP staffing requirements, such as a housing specialist

The Healthy Opportunities cost elements outlined above are separate from the pilot administrative and service payments paid separately by DHHS.

Finally, for counties included as part of the Integrated Care for Kids (InCK) program, Mercer evaluated the contractual requirements for the PHPs and expense feedback from the PHPs to develop an additional adjustment to account for InCK costs incurred by the PHPs during SFY 2026. The average Non-Expansion PMPM for Region 4 (i.e., the Region with impacted counties) is $1.80 PMPM for SFY 2026.

In total, Mercer developed a $14.86 PMPM for all rate cells in all rating periods within the non-service portion of capitation rates for care management costs based on the considerations and methodology outlined in the Section above, inclusive of Region 4 InCK costs. This PMPM is in addition to the CMARC, CMHRP, and AMH base payments included in the service portion of the capitation rates. See the following table for a detailed view of the components of the care management PMPM. The PMPMs shown are for the Non-Expansion and Expansion populations in aggregate. DHHS has not established minimum care management fees, and maintains the expectation that Standard Plans and providers will arrive at mutually agreeable rates that are commensurate with the intensity and breadth of the care management being provided.

Table 35: Care Management Components Detail

Activity	Cost ($PMPM)	Description
AMH/LHD Base Payments (Included in the Service Portion of the Capitation Rate)	**$4.46**	N/A
AMH Medical Home Fees	$2.34	Blended average of $2.50/$5.00 PMPM for non-ABD/ABD members assigned to all AMH Tiers, based on Standard Plan financial reports and encounters.
CMARC/CMHRP Base Payments	$2.12	Blended average of historical payments to LHDs as noted in Standard Plan financial reports and encounters and as outlined in the Contract ($4.56 PMPM for CMARC, $4.96 PMPM for CMHRP).
Total Care Management (As Noted Above)	**$14.86**	N/A
Care Management (Excluding Oversight/Accountability, Care Coordination, and Healthy Opportunities Activities)	**$10.86**	Intensive care management for individuals identified as being high needs or transitioning out of the hospital.
*Low Needs Members**	$3.30	
*Moderate Needs Members**	$4.38	
*High Needs Members**	$2.55	
*Supervisor**	$0.62	
LHD/Standard Plan Responsibility Overlap	$(0.42)	Offset for care management performed by LHDs.
InCK	$0.27	Statewide cost consideration for the InCK program ($2.21 PMPM per child enrolled within Region 4).
Oversight/Backstop Accountability	$2.46	Standard Plan oversight and coordination with Tier 3 AMHs.
Care Coordination	$1.56	Coordinating the provision of services across settings for all Standard Plan members.
Healthy Opportunities Activities	$0.14	Standard Plan activities to address social determinants of health for all populations (not specific to HOPs).
Total Care Management and Related Activities	**$19.32**	N/A

14.4 Non-Personnel Costs

The capitation rates include consideration for the non-personnel costs associated with program management, administrative operations, and care management. Non-personnel costs primarily consist of annual rent and utilities, as well as the necessary equipment and supplies required to operate a business, including computers

and cell phones. North Carolina commercial real estate market data from various regions throughout the State were utilized to develop cost expectations for the average annual rent cost per square foot per region. The capitation rates also capture costs for staff travel time, IT software, systems, and licensing.

The capitation rates reflect the administrative costs for third-party PBMs to contract with pharmacies and process/pay prescription drug claims for the PHPs. To calculate the impact, Mercer relied upon information reported by the PHPs within their financial reports. Mercer built $1.74 PMPM into administrative PBM costs for SFY 2026. For the Standard Plan, this is approximately $47 million on a projected SFY 2026 enrollment basis, inclusive of the Expansion population.

Finally, Mercer included consideration for the Interoperability and Patient Access Final Rule (CMS-9115-F), with provisions effective July 1, 2021. The Final Rule requires CMS-regulated payers, including Medicaid managed care plans, to implement and maintain information systems that give patients access to their health information.[23] The administrative load includes approximately $0.06 PMPM to allow for added technology-related expenses due to these requirements. The adjustment was based on CMS cost estimates, with consideration for Medicaid health plans operating in other state managed care programs.

14.5 Non-Benefit Expense Load Application to Capitation Rates

Each component within program management and administrative operations personnel, care management personnel, and non-personnel modeling is classified as either a fixed or variable cost. This approach recognizes that certain administrative costs will be incurred regardless of population size or the magnitude of medical claims (fixed costs), while others are a function of the size of the population served or services provided to members (variable costs). The capitation rates aggregated across all rate cells illustrate a split of approximately 30.0% fixed and 70.0% variable costs for each region.

The fixed PMPM is applied uniformly to all rate cells within each region (other than the Maternity Event payment), such that each rate cell receives the same fixed PMPM. The Maternity Event payment does not include the fixed portion of the administrative expense PMPM, as each pregnant person's rate cell capitation payment (concurrent with the Maternity Event payment) for non-delivery related services will include fixed administrative costs. The remaining portion of the administrative PMPM pertains to variable costs. The total regional PMPM was converted to a rate cell-specific PMPM based on the distribution of claim costs; the resulting variable PMPM varies by rate cell.

The Statewide Standard Plan non-benefit expense PMPM prior to the application of profit/underwriting gain and premium taxes is $35.29 for SFY 2026.

14.6 Profit/Underwriting Gain and Premium Taxes

Per ASOP 49, underwriting gain (or profit) provides compensation for the risk assumed by the MCO. Underwriting gain includes consideration for cost of capital and margin for risk contingency. Risks include insurance, investment, inflation, and regulatory risks, as well as risks associated with social, economic, and legal environments.

Mercer performed an analysis of projected cash flows and necessary capital given the age and scale of the program to establish an underwriting gain add-on as a factor of total capitation. Data includes State and federal taxes and enrollment data. Assumptions include those used in rate-setting, such as projected medical costs and other non-benefit costs like administration and premium tax assessments. This underwriting gain assumption is then scenario-tested under different risk-based capital levels, investment returns, and rate experience to determine possible underwriting gain levels, which cover the cost of maintaining necessary risk-based capital

[23] https://www.cms.gov/Regulations-and-Guidance/Guidance/Interoperability/index

reserves. Mercer then considers this cost of capital, plus an amount for risk margin, to create the final underwriting gain assumption. An overall profit/underwriting gain assumption of 1.85% has been included, comprised of 1.35% for cost of capital and 0.5% for margin for risk. This underwriting gain assumption was reviewed against the Society of Actuaries' Medicaid Managed Care Underwriting Margin Model for reasonability.

Mercer has included a 1.938% consideration for PHP premium taxes (1.9%) and regulatory charge (0.038%) in the SFY 2026 capitation rate development for all Non-Expansion and Expansion rate cells, per DHHS and Session Law 2023-134.[24]

15 CAPITATION RATE DEVELOPMENT EXHIBITS

The first exhibit in this section provides an overview of the MMs and capitation rates by COA and region. This exhibit is followed by detailed summaries illustrating the full rate development process for each regional rate cell, from the adjusted base data (including all adjustments outlined in Section 6) to the prospective adjustments outlined in Sections 8 through 13. Additionally, the non-medical expense considerations are outlined in each summary in accordance with the methodology in Section 14 of this Rate Book.

16 NC SELECT DRUG LIST CASE PAYMENTS

As noted in Section 10.2.2, to align with ongoing pharmaceutical advances, DHHS has updated pharmacy policies to include coverage for certain cell and gene therapies (CGTs) in their Medicaid programs. CGTs are considered breakthrough treatments and have the potential to cure rare conditions. They can also be high cost to provide to patients (e.g., recently approved treatments for Hemophilia and SCD can cost more than $2 million per administration). The State has also established a NC Select Drug List[25] for drugs that may be carved out of the inpatient DRG and outpatient ratio of cost to care payment structure and claimed separately to allow the State to capture available federal rebates. The NC Select Drug List will be updated as determined by DHHS and is subject to change. Plans should not be paying 340B claims for these drugs given that 340B claims are not rebate eligible.

To partially mitigate utilization risk to the PHPs of these high-cost drugs, while maintaining alignment with Department goals, (namely fully integrated managed care) the State has chosen to implement a case payment for drugs on the NC Select Drug List. These new case payments will be effective for the Standard Plan starting July 1, 2025. Not all the drugs on the NC Select Drug List may be eligible for a Case Payment, which is described in this section. As changes to the Drug List are made, DHHS and Mercer will consider modifications to the list of drugs eligible for a Case Payment. This determination will be at the discretion of DHHS. If updates are made to the Case Payments, the Contract will be updated, as appropriate.

Case payments, while still considered risk-based, are pre-determined dollar amounts paid outside of the normal capitation rate and are only made once a predefined trigger has occurred. This enhances the match of payment to risk as it more directly compensates the Plan which incurred the actual cost.

The actual payment amount will be a pre-established rate payable to the plan. To receive the case payment, the Plan must demonstrate through encounter data the provision of an eligible NC Select Drug List claim separately from other medical services.

The payment is intended to represent the estimated amount the State will receive as a statutory rebate as defined in the Federal Medicaid Drug Rebate Program. The remaining cost related to the estimated utilization of the NC Select Drug List (i.e., the estimated cost net of these rebates) will be funded as normal through capitation (see Section 10.2.2 for additional details on this rate adjustment). Through the delineation of only the estimated net paid amount for these drugs being funded through the capitation rates, and the rebate amount being funded through these separate case payments, Mercer and DHHS are ensuring there is no duplication of expected payments or liabilities in the approach.

The table below illustrates the NC Select Drug List that will be eligible for the NC Select Drug List case payment as of the publication date of this Rate Book, effective July 1, 2025. Additionally, the table illustrates how the SFY 2026 case payments were developed.

[25] The NC Select Drug List as of May 2025 can be found at the following link (last accessed April 8, 2025): https://medicaid.ncdhhs.gov/nc-select-drug-list-may-2025/download?attachment

Table 36: Build-Up of NC Select Drug List Case Payments

Condition(s)	Drug Name	Estimated Drug Cost[26]	Estimated Statutory Federal Rebate Percentage[27]	Estimated Rebate Portion[28]	Final Case Payment (Rebate Portion after Application of Premium Tax & Regulatory Surcharge)
Early Active Cerebral Adrenoleukodystrophy	Skysona™ (elivaldogene autotemcel)	$3,000,000	17.1%	$513,000	$523,138
Duchenne Muscular Dystrophy	Elevidys (delandistrogene moxeparvovec-rokl)	$3,200,000	17.1%	$547,200	$558,014
Hemophilia A	Roctavian™ (valoctocogene roxaparvovec-rvox)	$2,987,000	23.1%	$689,997	$703,633
Hemophilia B	Hemgenix® (etranacogene dezaparvovec-drlb)	$3,500,000	23.1%	$808,500	$824,478
Metachromatic Leukodystrophy (MLD)	Lenmeldy™ (atidarsagene autotemcel)	$4,250,000	17.1%	$726,750	$741,113
Inherited Retinal Dystrophy	Luxturna® (voretigene neparvovec-rzyl)	$913,750	23.1%	$211,076	$215,248
SCD and Transfusion-Dependent Beta Thalassemia (TDT)	Casgevy® (exagamglogene autotemcel)	$2,200,000	23.1%	$508,200	$518,244
SCD	Lyfgenia™ (lovotibeglogene autotemcel)	$3,100,000	23.1%	$716,100	$730,252
Spinal Muscular Atrophy	Zolgensma® (onasemnogene abeparvovec-xioi)	$2,322,045	17.1%	$397,070	$404,917
TDT	Zynteglo™ (betibeglogene autotemcel)	$2,800,000	23.1%	$646,800	$659,583

[26] Estimated Drug Cost based on national compendia.
[27] Estimated Statutory Federal Rebate Percentage Sourced from Medicaid Statutory Formula for Rebate Calculation.
[28] Actual rebate from manufacturer may vary from the estimate.

17 OTHER CONSIDERATIONS

The following section represents other financial considerations not reflected in the Section 15 capitation rate summaries.

17.1 Risk Corridor

DHHS has included two time-limited risk corridors in the PHP contract, which will apply to Contract Year 5. Both risk corridors establish 50% sharing of PHP gains/losses on service revenues outside of a defined corridor of +/−3% compared to the Target Service Ratio (TSR). The first risk corridor is for Non-Expansion populations. The second is a separate risk corridor specific to the Expansion populations. Both will apply for the July 1, 2025–June 30, 2026 rating period. The terms summarized in the remainder of this Section are identical for both risk corridors, as only the populations vary.

If the Reported Services Ratio is less than the TSR minus 3%, the PHP shall pay DHHS 50% of the Reported Services Ratio denominator multiplied by the difference between the TSR minus 3% and the Reported Services Ratio. If the Reported Services Ratio is greater than the TSR plus 3%, DHHS shall pay the PHP 50% of the Reported Services Ratio denominator multiplied by the difference of the Reported Services Ratio and the TSR plus 3%.

This risk corridor will be settled alongside the minimum primary care provider (PCP) expenditure requirement outlined in Section 17.2, which is only applicable to the Non-Expansion risk corridor, and prior to the minimum medical loss ratio (MLR) remittance calculation outlined in Section 17.5, which has implications to both the Non-Expansion and Expansion risk corridors.

The Reported Services Ratio will be calculated by each PHP in the following manner[29]:

- The numerator will be the sum of:
  - Incurred claims as defined in 42 CFR §438.8(e)(2)(i)–438.8(e)(2)(iii) for State Plan Services, approved ILOS, and approved Value-Added Services, not including additional utilization-based directed payments
  - AMH fees, excluding Tier 3 care management payments, as defined in Section 4.
  - Performance Incentive Payments to AMHs as defined in Section 4 — Provider Payments
  - Other quality-related payments to NC Medicaid providers, including payments to support provider access
  - Contributions to community-based health-related resources and initiatives that advance Health Equity, subject to DHHS review and approval
  - Payments required by the Minimum PCP Expenditure Requirement, if applicable
- The denominator shall be defined as set equal to the denominator of the DHHS-defined MLR outlined in Section 17.5.

The TSR for each rate cell and region combination will be defined in the following way:

- The numerator will be the total service costs assumed in the capitation rates for all capitated services, including AMH base payments, and will also include the risk margin component. The numerator will exclude any consideration for assumed cost of capital, premium taxes, regulatory surcharge, administrative, and care management rate components, including Health Care Quality Improvements (HCQIs) and AMH Tier 3 care management. This will also exclude the additional utilization-based and FQHC/RHC wrap payments as required in the Standard Plan contract.
- The denominator will be the total capitation rate, excluding all premium taxes and regulatory surcharges.

[29] The Standard Plan PHP contracts and subsequent amendments should be consulted for a full description of which items should be considered within this calculation. This is not intended to be a complete list of PHP contract requirements.

The PHP TSR shall be calculated using the TSR for each rate cell, weighted by the PHP's capitation revenue for each rate cell (excluding revenue associated with additional utilization-based and FQHC/RHC wrap payments). Should a PHP receive a payment through the NC Select Drug List Case Payment program, that portion of revenue will need to be considered in the final TSR appropriately for both Expansion and Non-Expansion.

The table below summarizes the TSR of each capitation payment that will be included in the calculation of the capitation revenue-weighted TSR required for the risk corridor.

Table 37a: Non-Expansion Population TSRs Underlying SFY 2026 Capitation Rates

COA	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6
ABD	92.2%	92.1%	91.8%	91.6%	91.8%	91.7%
TANF, Newborns (<1 Year)	91.9%	91.8%	91.5%	91.1%	91.5%	91.3%
TANF, Children (1 Year–20 Years)	89.7%	89.5%	89.0%	87.1%	88.4%	88.7%
TANF, Adults (21+ Years)	91.4%	91.4%	90.9%	90.6%	90.8%	90.8%
Maternity Event	94.9%	94.8%	94.5%	94.4%	94.6%	94.5%
NC Select Drug List Case Payment	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

Table 37b: Expansion Population TSRs Underlying SFY 2026 Capitation Rates

COA	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6
Newly Eligible, Ages 19 Years–24 Years	90.4%	90.4%	90.0%	89.5%	89.6%	89.7%
Newly Eligible, Ages 25 Years–34 Years	91.0%	91.0%	90.6%	90.2%	90.4%	90.4%
Newly Eligible, Ages 35 Years–44 Years	91.5%	91.5%	91.1%	90.8%	91.0%	90.9%
Newly Eligible, Ages 45 Years–64 Years	91.9%	91.8%	91.4%	91.3%	91.4%	91.3%
Maternity Event	94.9%	94.8%	94.5%	94.4%	94.6%	94.5%
NC Select Drug List Case Payment	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

17.2 Minimum PCP Expenditure Requirement

As part of the Standard Plan contract, DHHS will continue to require each PHP to spend a minimum percentage of capitation revenue on primary care services and quality payments. This requirement will only apply to Non-Expansion rate cells given the lack of historical data available to support establishing an appropriate baseline for the Expansion rate cells.

The minimum percentages are calculated as the PMPM proportion of base capitation rates assumed for utilization and expenses for Physician — Primary Care, FQHC/RHC excluding wrap payments funded outside of capitation, Other Clinic, Family Planning Services, and Medical Home Payments, each adjusted for the MOE acuity differences outlined in Section 12.3, divided by the total base capitation rate less premium taxes and the regulatory surcharge. The aggregate minimum percentage for each PHP will be calculated as 95% of the capitation revenue-weighted average of these percentages.

Table 38: Non-Expansion Minimum PCP Expenditures as a Percentage of Capitation Rates

COA	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6
ABD	4.3%	3.7%	4.0%	4.2%	4.6%	4.4%
TANF, Newborns (<1 Year)	12.1%	12.2%	12.4%	11.4%	12.9%	11.4%
TANF, Children (1 Year–20 Years)	17.4%	15.8%	15.9%	15.2%	16.5%	15.0%
TANF, Adults (21+ Years)	7.6%	7.6%	8.1%	7.2%	7.7%	7.0%
Maternity Event	26.5%	24.6%	24.7%	23.3%	23.4%	23.5%
NC Select Drug List Case Payment	N/A	N/A	N/A	N/A	N/A	N/A

The minimum PCP expenditure requirement will be evaluated along with the Non-Expansion risk corridor. If the PHP Reported Services Ratio exceeds the TSR under the risk corridor less 0.5% margin, no further payment will be required under the minimum PCP expenditure requirement. If the PHP's Reported PCP Expenditure Percentage is below the Minimum PCP Expenditure Percentage and the PHP Reported Service Ratio is less than the TSR less 0.5% margin, the PHP shall calculate the amount of required additional PCP payments needed by multiplying the denominator of the DHHS-defined MLR by the minimum of the following:

- The Minimum PCP Expenditure Percentage less the Reported PCP Expenditure Percentage.
- The TSR less the Reported Services Ratio, as defined in the Risk Corridor Section less 0.5% margin.

There will be no minimum PCP expenditure requirements specific to the Expansion populations within SFY 2026 due to the continued unknowns associated with Expansion rate-setting. DHHS will evaluate this decision in the future when more information is available.

17.3 Performance Withholds

DHHS is continuing the withhold program in SFY 2026, in which a portion of each plan's capitation rate will be withheld and paid when the plan meets reasonably achievable performance targets on priority measures. The long-term goal of the withhold is to ensure PHPs deliver value around the various DHHS priorities and improve the quality of care provided to the Medicaid population in North Carolina.

Withhold arrangements are defined under 42 CFR §438.6(a) as "any payment mechanism under which a portion of a capitation rate is withheld from an MCO, PIHP, or prepaid ambulatory health plan (PAHP) and a portion of or all of the withheld amount will be paid to the MCO, PIHP, or PAHP for meeting targets specified in the contract." The Standard Plan contracts include provisions for withholding capitation based on the below metrics beginning July 1, 2025.[30]

- Childhood Immunization Status
  - Overall population performance outperforms national trends
  - Priority population reduction in disparity
- Prenatal and Postpartum Care
  - Timeliness of prenatal care performance improvement
  - Postpartum care performance improvement
- Screening for Health-Related Resource Needs

Throughout the rating period, 1.5% of the PHPs' risk-adjusted capitation will be withheld. PHPs can earn back the full or a partial amount of the withheld capitation based on their performance against the identified metrics,[31] which will be assessed by DHHS' External Quality Review Organization at the end of the performance period.

Mercer reviewed the withhold payment implications and metrics to ensure they comply with federal regulations. Mercer determined that the withholds are reasonably achievable and therefore should be able to be fully repaid to the PHPs based on performance through this DHHS program. As a result, the capitation rates did not require any consideration for expected, unachievable withholds, as outlined in 42 CFR §438.6(b)(3).

[30] Detailed information around the Standard Plan Withhold Program can be found at: https://medicaid.ncdhhs.gov/2025-north-carolina-medicaid-standard-plan-withhold-program-guidance/open (accessed April 10, 2025).
[31] The technical specifications around quality reporting metrics are available at: https://medicaid.ncdhhs.gov/medicaid-managed-care-quality-measurement-technical-specifications-manual/download?attachment (accessed April 10, 2025).

17.4 Risk Adjustment

DHHS has implemented a prospective risk adjustment process for the Non-Expansion population as required by the managed care legislation (Section 5.5(a) of SL 2015-245). Health-based risk adjustment has been documented in multiple Society of Actuaries studies and other publications as a significantly better predictor of healthcare costs than traditional age/gender rating. A risk-adjusted payment process differentiates capitation payments to PHPs based on measured risk differences in their enrolled populations. Appropriately paying PHPs for their enrolled population enables the overall managed care program to operate effectively and efficiently and discourages PHPs to avoid enrolling higher risk individuals. Since risk adjustment is reliant on detailed claims or encounter information, the PHPs have a strong incentive to submit complete and accurate encounters. Finally, risk adjustment can simplify the rate structure by reducing the number of rate cells needed from a systems and payment perspective.

DHHS is using the combined Chronic Illness Disability Payment System and Medicaid Rx (CDPS+Rx) model to adjust the capitation payments to reflect the underlying health risk of the members enrolled in each PHP. The CDPS+Rx model is a disease classification system developed by researchers from the University of California, San Diego. The model uses medical and pharmacy data to assign risk markers that correlate to predictive, chronic disease conditions. The model was calibrated using State-specific FFS and LME/MCO encounter data to best reflect North Carolina's populations, provider practice patterns, and covered benefits. Additionally, to more accurately account for risk differential experienced in the Standard Plan program, DHHS and Mercer incorporated additional variables into the CDPS+Rx model, including variables to account for beneficiaries utilizing LTSS and beneficiaries with multiple conditions, and to differentiate beneficiaries without model conditions that utilize services from those that do not utilize services.

The final budget-neutral risk scores for each PHP are applied to the base capitation rates for the Medicaid population, therefore producing the risk-adjusted rates for each rate cell. The resulting capitation rates reflect the relative risk between PHPs and rate cells. Risk adjustment is applied to all Non-Expansion managed care populations, but is not applied to the Maternity Event payments, newborn rate cells, and NC Select Drug List Case Payments. For the Expansion population, prospective risk adjustment will be implemented for all rate cells starting October 1, 2025.

17.5 MLR

The 2016 CMS Medicaid Managed Care Final Rule outlines requirements for rate-setting and financial reporting related to the MLR. From a rate-setting standpoint, 42 CFR §438.4(b)(9) stipulates that rates must be established in such a way that a PHP would reasonably achieve an MLR of at least 85%. From a financial reporting perspective, CMS prescribes the MLR calculation methodology in 42 CFR §438.8 for states and their contractors, including how to classify various incurred costs and how to develop the numerator and denominator included in the ratio. Finally, the Final Rule allows, but does not require, states to implement a remittance process for PHPs that do not meet State-established minimum MLR thresholds.

17.5.1 Implied MLR Calculation Based on Capitation Rate Development

The capitation rates are developed independent of the MLR implications and are based on anticipated, reasonable expenditures required to meet the obligations put forth in the PHP contract. The capitation rates have not been developed based on a target MLR or influenced by any potential remittance process to be implemented by the State. Mercer calculated the implied MLRs for each rate cell on a Statewide average basis using the MLR methodology outlined in the Final Rule and the cost components utilized in the development of capitation rates. A summary of this calculation is offered below and illustrated in the tables below, split by program (Non-Expansion versus Expansion). Although CMS has established a minimum MLR for Medicaid rate-setting of 85%, the higher MLRs are allowable as long as rates "are adequate for reasonable, appropriate, and attainable non-benefit costs," as noted in 42 CFR §438.4(b)(9).

As is shown, the numerator includes all the expected medical claims for the rate cell (i.e., Gross Medical PMPM), as well as 85% of the included care management considerations included as part of the non-benefit expenses. These care management costs were included in the numerator, as DHHS expects much of the care management costs incurred by the PHPs to meet the definition of HCQIs, which is included as part of the numerator within the Final Rule MLR methodology. HCQIs are defined within 42 CFR §438.8(e)(3) as:

- Activities that improve health quality and increase the likelihood of desired health outcomes as defined in 45 CFR §158.150
- Activities related to any External Quality Review activities as defined at 42 CFR §438.358(b) and (c)
- Health IT expenses as defined at 45 CFR §158.151

For the NC Select Drug List Case Payments, the numerator will equal the total payment less premium tax and regulatory surcharge as shown in Section 16.

Additionally, within 42 CFR §438.8(f), CMS outlines that the denominator of the MLR should be premium revenues excluding amounts for PHP taxes/fees/assessments. Additionally, as any unearned withholds are not considered revenue payments received by the PHP, these amounts should also be excluded from the denominator. Earned withholds, however, are treated as revenue and should be included within the denominator. As a result, Mercer set the denominator in the table below as the total capitation rate less the PHP premium tax considerations included in the rate development process. For the NC Select Drug List Case Payments, the denominator will equal the total payment less premium tax and regulatory surcharge as shown in Section 16.

For comparison, Mercer also included a traditional pricing MLR calculation in the table below using a methodology that compares the Gross Medical PMPM to the total capitation rate. This pricing MLR is shown in row H of the table below. This was included to illustrate what portion of the total capitation rate is for medical costs. Also, one minus this ratio illustrates what portion of total capitation is intended for General Administration and Utilization Management, Care Management, Profit/Underwriting Gain, and Premium Taxes. These ratios are significantly lower than the Final Rule MLR, as they do not include any care management costs in the numerator and premium taxes are included in the denominator.

Table 39a: Non-Expansion Population Statewide Implied MLR Calculation by Rate Cell Utilizing Base Capitation Rates

Capitation Rate Component	ABD	TANF, Newborn (<1 Year)	TANF, Children (1 Year–20 Years)	TANF, Adults (21+ Years)	Maternity Event	NC Select Drug Case Payments	Total Non-Expansion
(A) = Gross Medical PMPM or Payment	$1,861.61	$911.47	$164.22	$453.94	$12,489.98	See table footnote	$368.26
(B) = Care Management PMPM or Payment	$66.47	$33.02	$6.31	$16.22	$446.04	N/A	$13.50
(C) = (A) + 85% x (B)	$1,918.11	$939.54	$169.58	$467.73	$12,869.11	N/A	$379.82
(D) = Total Capitation Rate	$2,078.39	$1,021.55	$189.96	$511.92	$13,534.93	See table footnote	$416.17
(E) = Premium Taxes PMPM or Payment	$40.28	$19.80	$3.68	$9.92	$262.31	See table footnote	$8.07
(F) = (D) − (E)	$2,038.11	$1,001.75	$186.28	$501.99	$13,272.62	See table footnote	$408.10
(G) = (C) / (F) = Implied MLR	**94.1%**	**93.8%**	**91.0%**	**93.2%**	**97.0%**	**100%**	**93.1%**
(H) = (A) / (D) = Pricing MLR	**89.6%**	**89.2%**	**86.4%**	**88.7%**	**92.3%**	**98.1%**	**88.5%**

Table 39b: Expansion Population Statewide Implied MLR Calculation by Rate Cell Utilizing Base Capitation Rates

Capitation Rate Component	Newly Eligible, Ages 19 Years–24 Years	Newly Eligible, Ages 25 Years–34 Years	Newly Eligible, Ages 35 Years–44 Years	Newly Eligible, Ages 45 Years–64 Years	Maternity Event	NC Select Drug Case Payments	Total Expansion
(I) = Gross Medical PMPM or Payment	$241.24	$349.29	$545.70	$859.76	$12,489.98	See table footnote	$529.22
(J) = Care Management PMPM or Payment	$8.59	$12.44	$19.43	$30.61	$446.04	N/A	$18.84
(K) = (I) + 85% x (J)	$248.54	$359.87	$562.22	$885.78	$12,869.11	N/A	$545.24
(L) = Total Capitation Rate	$275.17	$395.40	$613.93	$963.37	$13,534.93	See table footnote	$595.60
(M) = Premium Taxes PMPM or Payment	$5.33	$7.66	$11.90	$18.67	$262.31	See table footnote	$11.54
(N) = (L) – (M)	$269.84	$387.74	$602.03	$944.70	$13,272.62	See table footnote	$584.05
(O) = (K) / (N) = Implied MLR	**92.1%**	**92.8%**	**93.4%**	**93.8%**	**97.0%**	**100%**	**93.4%**
(P) = (I) / (L) = Pricing MLR	**87.7%**	**88.3%**	**88.9%**	**89.2%**	**92.3%**	**98.1%**	**88.9%**

Case Payments for the NC Select Drug List Case Payment vary by drug as shown in Section 16. The Gross Medical Payment for these drugs (Gross Medical Payment in the table above) equals the total payment less premium tax and regulatory surcharge and do not include a care management component.

17.5.2 Minimum MLR Threshold

As part of Medicaid Transformation, DHHS is instituting an MLR reporting and remittance process for all PHPs to ensure on a retrospective basis that PHPs direct a sufficient portion of the capitation payments received from DHHS to services and activities that improve health in alignment with the program goals and objectives. In accordance with SL 2018-49, a Statewide minimum MLR threshold will be established at 88% for healthcare services, with the components of the numerator and denominator to be defined by DHHS (DHHS-defined MLR). To recognize MLR variability across rate cells (as demonstrated in the table above), the minimum MLR threshold for each PHP shall be calculated as the revenue-weighted average of the PHP based on the rating group-specific minimum MLR thresholds shown in the tables below and the actual capitation revenue mix of the PHP by rate cell. The capitation revenue for each rating group that is used in this weighted average calculation shall exclude revenues associated with taxes and fees. The evaluation and outcome determination for the Expansion minimum MLR will be separate from the minimum MLR for the Non-Expansion Standard Plan populations.

Table 40a: Non-Expansion Population Contractual Minimum MLR Thresholds by Rating Group

ABD	TANF, Newborn (<1 Year)	TANF, Children (1 Year–20 Years)	TANF, Adults (21+ Years)	Maternity Event	NC Select Drug List Case Payments	Total Non-Expansion
89.2%	88.9%	85.7%	88.3%	92.2%	95.3%	88.0%

Table 40b: Expansion Population Contractual Minimum MLR Thresholds by Rating Group

Newly Eligible, Ages 19 Years–24 Years	Newly Eligible, Ages 25 Years–34 Years	Newly Eligible, Ages 35 Years–44 Years	Newly Eligible, Ages 45 Years–64 Years	Maternity Event	NC Select Drug List Case Payments	Total Expansion
86.6%	87.4%	88.0%	88.4%	92.2%	95.3%	88.0%

PHPs will be required to calculate and report two aggregate MLRs (one for Non-Expansion and one for Expansion) on an annual, retrospective basis aligned to the contract year according to the DHHS-defined MLR formula, as outlined in the contract.

If the PHPs' DHHS-defined MLR is less than the minimum MLR threshold as defined above, the PHP shall remit to DHHS a rebate equal to the denominator of the DHHS-defined MLR, multiplied by the difference between the minimum MLR threshold and the DHHS-defined MLR result. The PHP may make contributions to health-related resources or initiatives that advance public health and health equity (that meet certain requirements) in lieu of all or a portion of the required rebate.

Each DHHS-defined MLR (Non-Expansion and Expansion) will be evaluated separately. It is possible for a remittance to only be required for one of the two DHHS-defined MLRs depending on experience.

Additionally, PHPs will be required to report a single program-wide (i.e., includes Non-Expansion and Expansion) CMS-defined MLR as defined in the contract.

APPENDIX A — MATERNITY EVENT CRITERIA

Under managed care, DHHS pays a Maternity Event payment on all qualifying birth events. The Maternity Event payment was constructed to reflect a single payment per delivery, even in the case of multiple births during a delivery event. This payment includes the cost of the delivery event, along with pregnancy-related care during the prenatal and postpartum period. Approximately 83% of historical costs associated with the Maternity Event payment occur in the month of the qualifying birth event.

The tables below outline the specific logic used to develop the Maternity Event payment structure.

Step 1: Identify Delivery Event

The qualifying birth event is identified using the following logic of CPT codes and DRG codes. The qualifying birth event is flagged if there is either a CPT code **or** a DRG code on the claim. Although other codes may be used in other markets for birth events, the codes in the tables below align with the current NC Clinical Coverage Policy for Obstetrics and PMHs.

Qualifying Birth CPT Codes

CPT Code	Type	Description
59400	Vaginal	Delivery, Antepartum Care, and Postpartum Care
59409	Vaginal	Delivery
59410	Vaginal	Delivery and Postpartum Care
59510	Cesarean	Delivery, Antepartum Care, and Postpartum Care
59514	Cesarean	Delivery
59515	Cesarean	Delivery and Postpartum Care
59610	Vaginal Birth After Cesarean (VBAC)	Delivery, Antepartum Care, and Postpartum Care
59612	VBAC	Delivery
59614	VBAC	Delivery and Postpartum Care
59618	Attempted VBAC	Delivery, Antepartum Care, and Postpartum Care
59620	Attempted VBAC	Delivery
59622	Attempted VBAC	Delivery and Postpartum Care

Qualifying Birth DRG Codes

DRG Code	Description
783	Cesarean section with sterilization with a major complication or comorbidity (MCC)
784	Cesarean section with sterilization with a complication or comorbidity (CC)
785	Cesarean section with sterilization without CC/MCC
786	Cesarean section without sterilization with MCC
787	Cesarean section without sterilization with CC
788	Cesarean section without sterilization without CC/MCC
796	Vaginal delivery with sterilization and/or dilation and curettage (D&C) with MCC
797	Vaginal delivery with sterilization and/or D&C with CC
798	Vaginal delivery with sterilization and/or D&C without CC/MCC
805	Vaginal delivery without sterilization and/or D&C with MCC
806	Vaginal delivery without sterilization and/or D&C with CC
807	Vaginal delivery without sterilization and/or D&C without CC/MCC

Step 2: Identify Prenatal and Postpartum Care

For beneficiaries identified in Step 1 above as having a qualifying birth event, Mercer included all claims with the following ICD-10 codes in any diagnosis position for eight full months prior to and two full months following the delivery event. This captures the pregnancy-related costs for the prenatal and postpartum periods.

ICD-10 Code Ranges for Prenatal and Postpartum Care

Code Range	Description	Prenatal Care	Postpartum Care
O00–O08	Pregnancy with abortive outcome	Included only codes in which pregnancy outcome is unclear	Included only codes relating to puerperium
O09	Supervision of high-risk pregnancy	Included all codes	N/A
O10–O16	Edema, proteinuria and hypertensive disorders in pregnancy, childbirth, and the puerperium	Excluded codes relating to childbirth and puerperium	Included only codes relating to puerperium
O20–O29	Other maternal disorders predominately related to pregnancy	Excluded codes relating to childbirth and puerperium	N/A
O30–O48	Maternal care related to the fetus and amniotic cavity and possible delivery problems	Included all codes	N/A
O60–O77	Complications of labor and delivery	Included all codes dealing with unspecified, second, and third trimester	Included only codes relating to puerperium
O80–O82	Encounter for delivery	N/A	N/A
O85–O92	Complications predominately related to the puerperium	Included all codes dealing with unspecified, first, second, and third trimester	Included only codes relating to puerperium
O94–O9A	Other obstetric conditions, not elsewhere classified	Excluded codes relating to childbirth and puerperium	Included only codes relating to puerperium

Step 3: Identify Other Pregnancy-Related Services

For beneficiaries identified in Step 1 above as having a qualifying birth event, Mercer also included other pregnancy-related services, consistent with State clinical coverage policies. Utilization for these services is included for eight full months prior to and two full months following the delivery event.

Childbirth Education Clinical Coverage Policy

CPT Code	Description
S9442	Birthing Class

Obstetrics and PMH Clinical Coverage Policy

CPT Code	Description
59425	Antepartum care only; 4 visits–6 visits
59426	Antepartum care only; 7 or more visits
59430	Postpartum care only (separate procedure)
T1015	FQHC/RHC visit
59412	External cephalic version, with or without tocolysis
59414	Delivery of placenta (separate procedure)
99360	Physician standby service, requiring prolonged physician attendance, each 30 minutes (e.g., operative standby, standby for frozen section, for Cesarean/high-risk delivery, for monitoring EEG)
99464	Attendance at delivery (when requested by delivering physician) and initial stabilization of newborn
S0280	PMH Incentive
S0281	PMH Incentive

Fetal Surveillance Clinical Coverage Policy

CPT Code	Description
Ultrasound in Maternity Care	
76801	Ultrasound, pregnant uterus, real-time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks, 0 days), transabdominal approach; single or first gestation
76802	Ultrasound, pregnant uterus, real-time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks, 0 days), transabdominal approach; each additional
76805	Ultrasound, pregnant uterus, real-time with image documentation, fetal and maternal evaluation, after first trimester (> or + 14 weeks, 0 days), transabdominal approach; single or first gestation
76810	Ultrasound, pregnant uterus, real-time with image documentation, fetal and maternal evaluation, after first trimester (> or + 14 weeks, 0 days), transabdominal approach; each additional gestation
76811	Ultrasound, pregnant uterus, real-time with image documentation, fetal and maternal evaluation plus detailed fetal anatomic examination, transabdominal approach; single or first gestation
76812	Ultrasound, pregnant uterus, real-time with image documentation, fetal and maternal evaluation plus detailed fetal anatomic examination, transabdominal approach; each additional gestation
76813	Ultrasound, pregnant uterus, real-time with image documentation, first trimester fetal nuchal translucency measurement, transabdominal or transvaginal approach; single or first gestation
76814	Ultrasound, pregnant uterus, real-time with image documentation, first trimester fetal nuchal translucency measurement, transabdominal or transvaginal approach; each additional gestation
76815	Ultrasound, pregnant uterus, real-time with image documentation, limited (e.g., fetal heartbeat, placental location, fetal position, and/or qualitative amniotic fluid volume), one or more fetuses
76816	Ultrasound, pregnant uterus, real-time with image documentation, follow-up (e.g., reevaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, reevaluation of organ system(s) suspected or confirmed to be abnormal on a 76801)
76817	Ultrasound, pregnant uterus, real-time with image documentation, transvaginal
76820	Doppler velocimetry, fetal; umbilical artery
76821	Doppler velocimetry, fetal; middle cerebral artery
Fetal Oxytocin Stress Testing	
59020	Fetal Contract Stress Test
Fetal Non-Stress Testing	
59025	Fetal Non-Stress Test
Biophysical Profile	
76818	Fetal biophysical profile; with non-stress testing
76819	Fetal biophysical profile; without non-stress testing
Fetal Echocardiography	
76825	Echocardiography, fetal, cardiovascular system, real-time with image documentation (2D), with or without M-mode recording
76826	Echocardiography, fetal, cardiovascular system, real-time with image documentation (2D), with or without M-mode recording; follow-up or repeat study
76827	Doppler echocardiography, fetal, pulsed wave and/or continuous wave with spectral display; complete
76828	Doppler echocardiography, fetal, pulsed wave and/or continuous wave with spectral display; follow-up or repeat study
93325	Doppler echocardiography color flow velocity mapping
Amniocentesis and Chorionic Villus Sampling	
59000	Amniocentesis, Diagnostic
59001	Amniocentesis, Therapeutic
76946	Echo Guide For Amniocentesis
82143	Amniotic Fluid Scan

CPT Code	Description
82963	Assay Of Glucosidase
83661	L/S Ratio, Fetal Lung
83662	Foam Stability, Fetal Lung
83663	Fluoro Polarize, Fetal Lung
83664	Lamellar Body, Fetal Lung
84081	Amniotic Fluid Enzyme Test
88235	Tissue Culture, Placenta
88267	Chromosome Analysis, Placenta
88269	Chromosome Analysis, Amniotic
59015	Chorion Biopsy
76945	Echo Guide, Villus Sampling
Cordocentesis	
59012	Fetal Cord Puncture, Prenatal
Fetal Fibronectin Testing	
82731	Assay Of Fetal Fibronectin

Budget-Neutral Maternity Adjustment

As previously outlined in Section 4, the Maternity Event payment is constructed to capture costs related to the delivery event along with the cost of providing prenatal services (occurring eight full months prior to the qualifying birth event) and postpartum services (occurring two full months after the qualifying birth event). However, the data extract only reflects claims paid through August 2024. As such, prenatal costs associated with deliveries occurring after August 31, 2024 are not identified using the Maternity Event payment logic outlined in Steps 1–3 above.

To account for this delivery event identification lag, Mercer reviewed the proportion of Maternity Event costs associated with prenatal services for months in which the deliveries could be identified. Mercer then made an adjustment to shift a similar proportion of prenatal costs from all other rate cells into the Maternity Event Payment for births expected to occur in the months after the August 2024 runout period. The table below illustrates the budget-neutral shift in costs for prenatal services under the Maternity Event payment.

SFY 2024 Impact of Maternity Event Payment Adjustment

COA	Dollar Amount
ABD	$(395,821)
TANF, Newborns (<1 Year)	$0
TANF, Children (1 Year–20 Years)	$(3,531,567)
TANF, Adults (21+ Years)	$(16,527,424)
Maternity Event	$20,454,813
Total Standard Plan	**$0**

APPENDIX B — OTHER POPULATION ELIGIBILITY CRITERIA

Future Managed Care Populations Criteria

The following table represents the mapping logic used to define the future populations that DHHS has proposed to phase into managed care after initial implementation.

Future Managed Care Populations

Population Group	MCS Code	Description
Foster Children, Adopted Children, and Former Foster Care Children up to age 26 years	MCS011	Temporarily Excluded — Foster Care/Adoption
	MCS012	Temporarily Excluded — Foster Care/Adoption — Tailored Plan
	MCS030	Tribal — Temporarily Excluded — Foster Care/Adoption
	MCS031	Tribal — Temporarily Excluded — Foster Care/Adoption — Tailored Plan
	MCS038	IHS — Temporarily Excluded — Foster Care/Adoption
	MCS039	IHS — Temporarily Excluded — Foster Care/Adoption — Tailored Plan
Non-Dual LTSS — NF	MCS009	Temporarily Excluded — Facility
	MCS010	Temporarily Excluded — Department of State Operated Healthcare Facilities/Veterans Affairs Home
Dual Eligibles, not eligible for BH I/DD Tailored Plan	MCS007	Temporarily Excluded — Tailored Plan — Dual Eligible
	MCS008	Temporarily Excluded — Dual Eligible
	MCS013	Temporarily Excluded — Foster Care/Adoption — Dual Eligible
	MCS028	Tribal — Temporarily Excluded — Tailored Plan — Dual Eligible
	MCS029	Tribal — Excluded — Dual Eligible
	MCS037	IHS — Temporarily Excluded — Dual Eligible

Permanently Excluded Population Criteria

The following table represents the coding logic used to define the excluded populations.

Permanently Excluded Population Criteria

Population Group	MCS Code	Description
Medically Needy	MCS016	Excluded — Medically Needy
	MCS033	Tribal — Excluded — Medically Needy
	MCS041	IHS — Excluded — Medically Needy
Family Planning	MCS018	Excluded — Family Planning
PACE	MCS019	Excluded — PACE
Partial Duals	MCS020	Excluded — Partial Dual Eligible
Aliens (Emergency Services Only)	MCS021	Excluded — Emergency Services Only
Refugees	MCS022	Excluded — Refugee
Health Insurance Premium Program (HIPP)	MCS017	Excluded — HIPP
Inmates	MCS023	Excluded — Incarcerated
Presumptive Eligibility	MCS024	Excluded — Presumptive Eligibility

Population Group	MCS Code	Description
Formerly Incarcerated (FI)[32]	MCS074-126	FI — Mandatory Standard Plan, FI — Tailored Plans (Various), FI — Foster Care/Adoption (Various), FI — Temporary Excluded (Various), FI — Tribal (Various), FI — IHS (Various), FI — Excluded (Various)
CAP/C	MCS014	Temporarily Excluded — CAP/C
	MCS025	Tribal — Temporarily Excluded — CAP/C
	MCS047	IHS — Temporarily Excluded — CAP/C
CAP/DA	MCS015	Temporarily Excluded — CAP/DA
	MCS044	Tribal — Temporarily Excluded — CAP/DA
	MCS048	IHS — Temporarily Excluded — CAP/DA
Uninsured COVID-19 Group	MCS043	Excluded — COVID-19 Group

[32] Effective January 1, 2025, formerly incarcerated beneficiaries are excluded from Standard Plan managed care for a period of 365 days following release. These beneficiaries will be enrolled in the Medicaid Direct BH program during this period.

APPENDIX C — SUPPLEMENTAL DATA FOR LTSS SERVICES

Mercer has provided the table below illustrating historical costs for LTSS services, with further delineation than what is provided in other sections of this Rate Book. As discussed in Section 4, the PHPs are responsible for up to 120 days of new long-term nursing home stays for non-dual members, at which point the member would be disenrolled from the Standard Plan. The tables below reflect base data for SFY 2024 and include adjustments presented in Section 6 of this Rate Book.

SFY 2024 LTSS Adjusted Base Data PMPM for Standard Plan COA

COA	NF	Personal Care	Home Health	Hospice
ABD	$15.85	$44.61	$21.59	$7.18
TANF, Newborns (<1 Year)	$0.00	$0.00	$1.70	$0.10
TANF, Children (1 Year–20 Years)	$0.01	$0.02	$0.37	$0.01
TANF, Adults (21+ Years)	$0.23	$0.87	$0.34	$0.11
Maternity Event	$0.00	$0.00	$1.20	$0.00
Total Standard Plan	**$1.00**	**$2.85**	**$1.67**	**$0.46**

SFY 2024 LTSS Adjusted Base Data PMPM for ABD COA by PHP Region

Region	NF	Personal Care	Home Health	Hospice
Region 1	$21.81	$11.05	$14.93	$9.35
Region 2	$18.98	$36.51	$16.11	$9.58
Region 3	$17.16	$63.45	$24.59	$8.36
Region 4	$11.07	$49.90	$24.92	$5.52
Region 5	$11.89	$44.88	$22.45	$6.11
Region 6	$17.89	$40.59	$22.36	$5.12
Total Statewide ABD	**$15.85**	**$44.61**	**$21.59**	**$7.18**

APPENDIX D — COS CRITERIA

The following table is referenced directly from Version 4.4 of the Standard Plan Financial Reporting Manual. The information represents the mapping logic used to define the COS. The COS groups are assigned in a hierarchy. The final column of the table includes the Sort Sequence reference number, which is also highlighted in Section 5, for the categories that are combined for purposes of base data summarization. Expenditures are only included in the data summaries for populations covered under the Standard Plan.

Appendix B: Category of Service (COS) Logic

The Logic for each COS applies not only to Plan reporting Expense Lines on "Schedule B - Medicaid Income Statement" of the Financial Reporting Template but also to Plan deriving COS code for Encounter Data Lines.

Categories of Service define most of the Medical Expense Lines on the Schedule B Medicaid Income Statement. COS logic does NOT address expense lines for "Placeholder", "Other Contractual Requirements", “Change in IBNR", "Expenditures Related to Directed Payments Reimbursed Separate from the Capitation and Maternity Event Payments”.

COS Specifications	COS	Coding Logic	Notes	Income Statement Line #	Sort Sequence
Value-based Payments	Value Based Payments (VBP): Linked to Quality & Value, Plan-initiated	▪ Plan-initiated Category 2 VBP payments, as defined in the Alternative Payment Model Framework by the Health Care Payment Learning & Action Network (HCP-LAN) ▪ Inclusion: Pay-for-reporting and Pay-for-performance payments for non-Advanced Medical Home (AMH) providers. ▪ Inclusion: Other foundational payments for which there is not an existing “Care Management” or “AMH Payments” COS Specification.	Plan-derived COS code 202V Specify on FRT Schedule W the Income Statement Line(s) where PHP has coded the expense	Varies – See Notes	1
Value-based Payments	Value Based Payments (VBP): Shared Savings, Plan-initiated	▪ Plan-initiated Category 3 VBP payments, as defined in the Alternative Payment Model Framework by the Health Care Payment Learning & Action Network (HCP-LAN) ▪ Inclusion: Shared Savings and Shared Shavings/Downside Risk payments.	Plan-derived COS code 203V Specify on FRT Schedule W the Income Statement Line(s) where PHP has coded the expense	Varies – See Notes	2

COS Specifications	COS	Coding Logic	Notes	Income Statement Line #	Sort Sequence
Value-based Payments	Value Based Payments (VBP): Population-based Payments, Plan-initiated	▪ Plan-initiated Category 4 VBP payments, as defined in the Alternative Payment Model Framework by the Health Care Payment Learning & Action Network (HCP-LAN)	Plan-derived COS code 204V Specify on FRT Schedule W the Income Statement Line(s) where PHP has coded the expense	Varies – See Notes	3
Professional	Family Planning Services	▪ For Family Planning Services logic, please go to the EPS Portal (NC EPS) and navigate to Documentation/Guides/ Encounter Data Submission Guide	Plan-derived COS code 224A *The Family Planning logic defined here matches the logic to identify the "Family Planning Indicator" that PHPs apply to Encounter Data sent to NC Medicaid*	32	4

APPENDIX E — DECEMBER 1, 2022 BH I/DD TAILORED PLAN CRITERIA

APPENDIX B — Tailored Plan Eligibility Criteria

UPDATED: October 2022

Per NC General Statute 108D-40, beneficiaries eligible for the Behavioral Health I/DD Tailored Plan (Tailored Plan) include those with a serious mental illness (SMI), a serious emotional disturbance (SED), a severe substance use disorder (SUD), an intellectual/developmental disability (I/DD), or who have survived a traumatic brain injury (TBI) and who are receiving traumatic brain injury services, who are on the waiting list for the Traumatic Brain Injury waiver, or whose traumatic brain injury otherwise is a knowable fact. This document outlines the specific data criteria DHHS is using to identify beneficiaries eligible for the Behavioral Health I/DD Tailored Plan.

Tailored Plans are scheduled to launch on April 1, 2023. NC Medicaid began notifying individuals of their eligibility for a Tailored Plan in August, and additional beneficiaries will be identified and receive notices based on regular review of newly available data. The criteria (below) used to identify beneficiaries eligible for the Tailored Plan relies on data available to NC Medicaid, including but not limited to Medicaid and state-funded services claims and encounters, reports from LME-MCOs, and Medicaid enrollment and eligibility data. Individuals must also meet managed care eligibility to be enrolled in a Tailored Plan.

Criteria that are based on service utilization only or a combination of diagnosis and service utilization (Medicaid and state-funded services) require that the date of service be on or after Dec. 1, 2020. Eligibility criteria that are based on diagnosis alone allow for a longer look back period of Jan. 1, 2018. Beneficiaries who are identified as meeting Tailored Plan eligibility criteria may be auto-enrolled in the Tailored Plan or may have the option to enroll in the Tailored Plan depending on their situation. More information on plan options is available at Managed Care Populations and Enrollment Notices Fact Sheet.

Medicaid beneficiaries who are not identified as eligible for enrollment in a Tailored Plan based on data reviews described in this document but need to move to a Tailored Plan to receive the behavioral health, I/DD, or TBI services they need can fill out the Request to Move Form, or request their provider to fill out the form. Beneficiaries who utilized the Request to Move process in the past will continue to remain eligible for a Tailored Plan.

Tailored Plan data criteria are also used to identify beneficiaries in NC Medicaid Direct who are eligible for Tailored Care Management[1]. Tailored Care Management is scheduled to launch on December 1, 2022. The lookback periods and criteria described in this document also apply to identifying this population. All beneficiaries enrolled in a Tailored Plan are eligible for Tailored Care Management unless they are receiving a service with duplicative care management (e.g. high fidelity wraparound).

Questions and comments can be provided by emailing Medicaid.Transformation@dhhs.nc.gov. More information about this process is available under Final Policy Guidance.

[1] Tailored Care Management is a Health Home State Plan service only available to beneficiaries with full Medicaid benefits. Beneficiaries in limited benefit programs, such as family planning or partial Medicare/Medicaid dual eligibles, are not eligible for Tailored Care Management.

Tailored Plan Criterion	Description	Look Back Period
Innovations Waiver	All members identified as being on the Innovation Waiver. Beneficiaries with a Special Coverage Code of "IN" or "CM."	Based on benefit enrollment data
TBI Waiver	All members identified as being on the Traumatic Brain Injury Waiver. Beneficiaries with a Special Coverage Code of "BH" or "BN."	
Transition to Community Living (TCL)	DHHS maintains a list of all beneficiaries targeted per the TCL and as reported by the LME-MCOs. Certain beneficiaries on the TCL list have an applicant status indicating that they were "removed" from TCL, and thus these beneficiaries will not be considered eligible for the Tailored Plan via the TCL criteria	Based on most recent roster/report from LME-MCO
Innovations Waitlist	DHHS maintains a list of beneficiaries on the Innovations Waiver Waitlist as reported by the LME-MCOs.	Based on most recent roster/report from LME-MCO
TBI Waiver Waitlist[2]	DHHS will maintain a list of beneficiaries on the TBI Waiver Waitlist as applicable.	Based on most recent roster/report from LME-MCO
Tailored Plan-Only Medicaid Service	Utilization within the historical claims and/or encounters for a service listed in Table 1.1-1.3.	12/1/20
Children with Complex Needs (CWCN)	DHHS maintains a list of all beneficiaries identified as CWCN as reported by the LME-MCOs.	Based on most recent roster/report from LME-MCO
IDD Diagnosis	Beneficiaries identified as having an I/DD diagnosis identified through a claim or encounter with a qualifying I/DD diagnosis code(s) (all diagnosis positions) as listed in Table 2.	1/1/18
SMI/SED Diagnosis	Beneficiaries identified as having an SMI or SED diagnosis listed in Table 3 in any position on a claim or encounter.	1/1/18
SMI/SED Diagnosis and Enhanced Service	Beneficiaries identified as having an SMI or SED eligible diagnosis listed in Table 4 in the primary position on a claim or encounter AND utilization of an enhanced Behavioral Health service as listed in Table 5 on a claim or encounter. The diagnosis and enhanced Behavioral Health utilization qualifying event do not need to occur on the same claim.	12/1/20
SUD Diagnosis and Enhanced Service	Beneficiaries identified as having a SUD eligible diagnosis listed in Table 6 in a primary position on a claim or encounter AND utilization of an enhanced Behavioral Health service as listed in Table 5 on a claim or encounter. The diagnosis and enhanced Behavioral Health utilization qualifying event do not need to occur on the same claim.	12/1/20
Two Psychiatric Hospitalizations in 18 months	Individuals known to DHHS to have had two or more psychiatric hospitalizations within an 18-month time period — identified in claims and encounters as described in Table 7.	12/1/20
Public psychiatric hospital or ADATC admission,	This includes, but is not limited to, individuals known to DHHS to have had one or more involuntary treatment episode in a State-owned facility.	12/1/20
Two psychiatric ED visits in 18 months	Individuals known to DHHS to have had two or more psychiatric ED visits within an 18-month time period. Psychiatric ED visits are identified based on Revenue Code 450 and a qualifying diagnosis in the primary or secondary diagnostic position on a FFS claim or Standard Plan encounter (qualifying diagnoses can be found on Table 3 for SMI/SED and Table 6 for SUD). For LME/MCO encounters, this is based on the revenue code 450 alone.	12/1/20
Two behavioral health crisis service episodes in 18 months	Beneficiaries identified in claims or encounter based on utilization of the procedure codes listed in Table 8.	12/1/20

[2] There is not currently a waitlist for the TBI Waiver

Tailored Plan Criterion	Description	Look Back Period
Single ED Visit – Special Code/Suicide attempt	Beneficiaries identified in claims and encounters as having an Emergency Department facility claim with a diagnosis code in any position listed in Table 9. DHHS used available data to identify beneficiaries meeting these criteria once prior to Standard Plan launch and once prior to Behavioral Health I/DD Tailored Plan launch.	12/1/20
Antipsychotic medication	Beneficiaries identified as using clozapine or long-acting injectable antipsychotics in the fee-for-service claims based on utilization of one of the products listed in Table 10. DHHS will continue to update list based on latest available products.	12/1/20
Electroconvulsive Therapy	Beneficiaries identified as having received Electroconvulsive Therapy identified in claims or encounters based on utilization of CPT code 90870 or revenue code 0901.	12/1/20
DMH Funded Service Use – Behavioral health	Beneficiaries with evidence of utilization of Behavioral Health services funded with State, Local, Federal or Other Non-Medicaid Funds — Identification logic leveraged State-funded claims experience based on data available through NCTracks	12/1/2020
DMH Funded Service Use – I/DD	Beneficiaries with evidence of utilization of I/DD or TBI services funded with State, Local, Federal or Other Non-Medicaid Funds — Identification logic leveraged State-funded claims experience based on data available through NCTracks	12/1/2020
Assessment, Request to Move Notification	Beneficiaries who are not identified in the available data but believe they meet Behavioral Health I/DD Tailored Plan eligibility can request a review for Behavioral Health I/DD Tailored Plan eligibility.	N/A

Note: Services utilization and diagnoses are based on review of fee-for-services (FFS) claims, LME-MCO encounters and Standard Plan encounters unless otherwise noted.

Table 1.1: Tailored Plan Behavioral Health Services (Not Available in Standard Plans) – Medicaid

Code types include state categories of services (SCOS), revenue codes (REV) and procedure codes (PROC) as noted below.

Code Type	Code	Description
SCOS	0017	PRTF
SCOS	0021	PRTF
SCOS	0041	PRTF
SCOS	0047	PRTF
REV	0911	PRTF
PROC	G2021	COMPREHENSIVE CLINICAL SUPPORT SERVICES
PROC	H0012	Substance Abuse (SA) Non-Medical Community Residential Treatment
PROC	H0013	SA Medically Monitored Community Residential Treatment
PROC	H0015	SA Intensive Outpatient Program
PROC	H0018	RESIDENTIAL SERVICE
PROC	H0019	Residential Level 3 or Level 4
PROC	H0032	HIGH FIDELITY WRAPAROUND
PROC	H0036	FAMILY CENTERED TREATMENT
PROC	H0038	HIGH FIDELITY WRAPAROUND, and related In-Lieu of Services
PROC	H0040	Assertive Community Treatment
PROC	H0043	One Time Transitional Cost
PROC	H0045	Respite
PROC	H0046	Residential Level 1
PROC	H0217	Psychosocial Rehabilitation
PROC	H2012	Child/Adolescent Day Treatment
PROC	H2015	Community Support Team Community Networking
PROC	H2016	Residential Supports 1 Residential Supports 4
PROC	H2017	Psychosocial Rehabilitation
PROC	H2020	Residential Supports 3
PROC	H2021	Day Supports - Individual/Group
PROC	H2022	Intensive In-Home Services, and related In-Lieu of Services
PROC	H2023	Supported Employment
PROC	H2026	Supported Employment Maintenance
PROC	H2033	Supported Living – Level 1 Supported Living – Level 2 Supported Living – Level 3
PROC	H2035	SA Comprehensive Outpatient Treatment Program
PROC	S5145	Residential Level 2 - Family Setting
PROC	T1012	Intensive Recovery Supports
PROC	T1019	Personal Care/Individual Support

Table 1.3: ICF

The following ICF codes are used to identify individuals in ICF residential facilities:

- *For LME-MCO encounters, revenue code 0100 and 0183*
- *For FFS and Standard Plan encounters data, SCOS codes 0021 and 0047*

Table 2: IDD Diagnosis

Code	Description	Code	Description
D82.1	Di George's syndrome	F84.9	Pervasive developmental disorder, unspecified
E70.0	Classical phenylketonuria	G31.81	Alpers disease
E75.00	GM2 gangliosidosis, unspecified	G31.82	Leigh's Disease
E75.01	Sandhoff disease	G80.0	Spastic quadriplegic cerebral palsy
E75.02	Tay-Sachs disease	G80.3	Athetoid cerebral palsy
E75.09	Other GM2 gangliosidosis	Q05.4	Unspecified Spina Bifida With Hydrocephalus
E75.10	Unspecified gangliosidosis	Q05.8	Sacral spina bifida without hydrocephalus
E75.11	Mucolipidosis IV	Q07.02	Arnold-Chiari Syndrome with Hydrocephalus
E75.19	Other Gangliosidosis	Q07.03	Arnold-Chiari Syndrome With Spina Bifida And Hydrocephalus
E75.23	Krabbe disease	Q85.1	Tuberous sclerosis
E75.25	Metachromatic Leukodystrophy	Q86.0	Fetal Alcohol Syndrome

Code	Description	Code	Description
E75.29	Other Sphingolipidosis	Q87.1	Congenital malformation syndromes predominantly associated with short stature (includes Prader-Willi)
E75.4	Neuronal ceroid lipofuscinosis	Q90.0	Trisomy 21, nonmosaicism (meiotic nondisjunction)
E76.01	Hurler's syndrome	Q90.1	Trisomy 21, mosaicism (mitotic nondisjunction)
E76.1	Mucopolysaccharidosis, type II	Q90.2	Trisomy 21, translocation
E76.22	Sanfilippo Mucopolysaccharidoses	Q90.9	Down Syndrome, Unspecified
E76.29	Other Mucopolysaccharidoses	Q91.0	Trisomy 18, nonmosaicism (meiotic nondisjunction)
E76.3	Mucopolysaccharidosis, unspecified	Q91.1	Trisomy 18, mosaicism (mitotic nondisjunction)
E77.1	Defects In Glycoprotein Degradation	Q91.2	Trisomy 18, translocation
E78.71	Barth syndrome	Q91.3	Trisomy 18, unspecified
E78.72	Smith-Lemli-Opitz Syndrome	Q91.4	Trisomy 13, nonmosaicism (meiotic nondisjunction)
F70	Mild intellectual disabilities	Q91.5	Trisomy 13, mosaicism (mitotic nondisjunction)
F71	Moderate intellectual disabilities	Q91.6	Trisomy 13, translocation
F72	Severe intellectual disabilities	Q91.7	Trisomy 13, unspecified
F73	Profound intellectual disabilities	Q93.4	Deletion of short arm of chromosome 5
F84.0	Autistic Disorder	Q93.82	Williams syndrome (code as of 1/1/2019, previously Q89.8)
F84.2	Rett's Syndrome	Q93.51	Angelman syndrome (code as of 1/1/2019, previously Q93.5)
F84.3	Other childhood disintegrative disorder	Q98.4	Klinefelter syndrome, unspecified
F84.5	Asperger's syndrome	Q99.2	Fragile X Chromosome
F84.8	Other pervasive developmental disorders		

Table 3: SMI/SED Diagnosis (Does not require an Enhanced Service)

Diagnosis Code	Description	Diagnosis Type
F20.0	Paranoid schizophrenia	SED_SMI
F20.1	Disorganized schizophrenia	SED_SMI
F20.2	Catatonic schizophrenia	SED_SMI
F20.3	Undifferentiated schizophrenia	SED_SMI
F20.5	Residual schizophrenia	SED_SMI

F13.239	Sedative, hypnotic or anxiolytic dependence with withdrawal, unspecified	F19.259	Other psychoactive substance dependence with psychotic disorder, unspecified
F13.250	Sedative, hypnotic or anxiolytic dependence with sedative, hypnotic or anxiolytic-induced psychotic disorder with delusions	F19.26	Other psychoactive substance dependence with persist amnestic disorder
F13.251	Sedative, hypnotic or anxiolytic dependence with sedative, hypnotic or anxiolytic-induced psychotic disorder with hallucinations	F19.280	Other psychoactive substance dependence with anxiety disorder
F13.26	Sedative, hypnotic or anxiolytic dependence with sedative, hypnotic or anxiolytic-induced persisting amnestic disorder	F19.281	Other psychoactive substance dependence with sexual dysfunction
F13.29	Sedative, hypnotic or anxiolytic dependence with unspecified sedative, hypnotic or anxiolytic-induced disorder	F19.282	Other psychoactive substance dependence with sleep disorder
F14.10	Cocaine abuse, uncomplicated	F19.288	Other psychoactive substance dependence with other disorder
F14.20	Cocaine dependence, uncomplicated	F19.29	Other psychoactive substance dependence with unspecified disorder

Table 7: Psychiatric Hospitalizations

Psychiatric hospitalizations are defined through DRGs for FFS an Standard Plan encounters, and through revenue codes for LME-MCO encounters as described below:

Record Type	Code Type	Code
FFS Claims and Standard Plan Encounters	DRG	876, 880-887, 894-897
LME-MCO Encounters	REV	0101-0219

Table 8: Behavioral Health Crisis Services

Procedure Code	Description
90839	Psychotherapy for crisis
90840	Psychotherapy for crisis
H0010	Non-Hospital Medical Detox
H2011	Mobile Crisis Management
H2036	Medically Supervised Detox Crisis Stabilization
S9484	Facility Based Crisis Service

Table 9: ED Special Code

Diagnosis Code	Description
T1491XA	Suicide Attempt Visit to the Emergency Department
T1491XD	Suicide Attempt Visit to the Emergency Department
T1491XS	Suicide Attempt Visit to the Emergency Department

Table 10: Antipsychotic Medications

The RX Consolidation list includes the list of medications used as of October 2022. This list will be updated monthly to reflect changes in medication availability.

APPENDIX F — SUMMARY OF CONTRACTUAL PAYMENT AND RISK SHARING TERMS

This appendix summarizes capitation payment, risk sharing terms, and figures included elsewhere in the Rate Book. The table is for the capitation rates effective July 1, 2026–June 30, 2026. Note that the ABD, TANF, Children and TANF, Adults will be risk-adjusted quarterly starting July 1, 2025 as outlined in Section 17. All Newly Eligible rate cells will be risk-adjusted quarterly beginning October 1, 2025.

July 1, 2025–June 30, 2026 Time Period

Capitation Rates by Region and COA

COA	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6
ABD	$2,168.38	$2,158.62	$2,229.38	$2,102.42	$1,914.92	$1,919.21
TANF, Newborns (<1 Year)	$1,044.29	$1,028.61	$1,045.67	$1,054.85	$967.59	$962.96
TANF, Children (1 Year–20 Years)	$216.75	$192.99	$190.63	$184.16	$187.16	$179.99
TANF, Adults (21+ Years)	$565.35	$546.10	$497.38	$503.33	$505.29	$494.55
Maternity Event	$13,396.05	$13,814.14	$13,959.68	$13,391.95	$12,751.18	$13,679.34
Newly Eligible, Ages 19 Years–24 Years	$290.64	$285.95	$275.97	$269.56	$270.86	$260.91
Newly Eligible, Ages 25 Years–34 Years	$416.28	$411.50	$396.75	$387.50	$389.15	$374.47
Newly Eligible, Ages 35 Years–44 Years	$647.95	$639.53	$616.20	$600.84	$603.37	$581.45
Newly Eligible, Ages 45 Years–64 Years	$1,029.25	$1,003.74	$966.67	$938.53	$943.42	$914.01

NC Select Drug List Case Payments (Statewide)

Drug Name	Case Payment
Skysona™ (elivaldogene autotemcel)	$523,138
Elevidys (delandistrogene moxeparvovec-rokl)	$558,014
Roctavian™ (valoctocogene roxaparvovec-rvox)	$703,633
Hemgenix® (etranacogene dezaparvovec-drlb)	$824,478
Lenmeldy™ (atidarsagene autotemcel)	$741,113
Luxturna® (voretigene neparvovec-rzyl)	$215,248
Casgevy® (exagamglogene autotemcel)	$518,244
Lyfgenia™ (lovotibeglogene autotemcel)	$730,252
Zolgensma® (onasemnogene abeparvovec-xioi)	$404,917
Zynteglo™ (betibeglogene autotemcel)	$659,583
